Thread: [Thinking about starting Java course](#)

R2GP - July 6, 2016, 5:15 pm

Object-oriented Java programming - course title it is a level 2.

I new to coding, just learning the basics. But this course seems to have grabbed my attention, it is a level 2 course online via a university. Do you think it is worth me doing? I can obviously self learn, but I think this will help me climb the ladder of coding, In a academic sense. The course is costing around £1400, which I am willing to fork out.

To highlight my points;

I am wanting to do it because it will help me learn the basics much quicker.

Academic path

Looks good if going for jobs in Programming.

Thank you for reading ?

Object-oriented programming is definitely something you'll have to learn if you're looking for a career in computer science :)

Can you find course syllabus? Post it here so others can give an opinion.

I would say 1,4K is a lot to pay for a single course, therefore I am wondering about its quality.

Wulfa989 - July 8, 2016, 12:13 pm

R2GP is the course through a university? Because those classes can be expensive, but Java is a nice starting area into OOP.

Echtar - July 8, 2016, 12:15 pm

I usually learn it online or learn from Udemy (warez disallowed) (which is ripped for free) or other site :D

Well,i go very slow...but i can go far
