Can I host a SA-MP server on your Windows VPS if I purchase one?

San Andreas Multiplayer is a multiplayer mod for GTA:SA. We can't use Linux because of this one .dll that we need so we're looking for a Windows VPS host that will let us host our server. All we need is port 7777 to be forwarded, but honestly we could use any forwarded port, it doesn't matter to us.

edit: Also are these servers DDoS protected?

Personally on our own site we use our own SMTP Server so I am not sure what you are experiencing. You should be okay hosting those just dont get 100 reports and of course no child porn.

Pretty much the response I always get. I've opened one regarding a refund, and your tech or whom ever simply insists multiple times; "What mod-pack was it?", No thanks, id just like a refund. No response for 12 hours, I ask again "I asked what mod-pack you'd like".

So far, I am pleased with the VPN service, but I cannot say the same with any other service. It has been nothing but support tickets and trouble.

(I am still awaiting response in regards of a refund.)

This means, You can ONLY GET A REFUND FOR; Webhosting, Minecraft Servers, and Resellers, BUT you CANNOT get a refund regarding the Domain Name purchase.

If that is not the case, you need to spend some time rewording it and clarify it in the TOS. However, if it is the case, I have requested a refund, and would like that taken care of.

Hey man it was emailed. You can also check all emails from your client area. However I believe I replied to your ticket.

Thanks for ordering!
