Thread: [\[TUT\] Create Fake Download Pages / wget](#)

YayHar - July 13, 2016, 11:35 am

How?:

Download wget here: <http://gnuwin32.sourceforge.net/packages/wget.htm>

Navigate to where wget.exe was downloaded

Open up command prompt and drag wget.exe into it

Now take the url of a download page, for example
www.google.com/chrome

Paste it in and click enter

Sometimes it will say "Unable to establish an SSL connection"

Just put --no-check-certificate before the url and you're good!

What was scraped is the index.html

Why?:

Why would you need this? Why in the RAT section?

Sometimes, the way to get somebody to download something is by pretending to a bigger company.

JASON AND MEDEA - July 13, 2016, 11:40 am

Thanks for this tut! It's answered a few of my queries.

Ventriloquism - July 13, 2016, 7:19 pm

This is interesting: 3 Ill investigate this more tomorrow. Thanks ?

K3njii - July 13, 2016, 7:36 pm

Nice tutorial. Thanks for the continuous contributions.

Essence - July 13, 2016, 8:02 pm

"The filename, directory name, or volume label syntax is incorrect."

Idk if I'm retarded, but after installing the auto setup, the program was called "sed" not "wget" lol.

Which package did you download on the site? Always pick the first one

Well, now I got the right one, but I am still getting the same error even when using the google chrome download page.

Add a space between the file and the url.

Did you ever manage to resolve the issue?

bzr? - July 25, 2016, 6:09 am

I'm not sure if I'm missing something, but where does it output the index.html? Cannot find it.

Liquir - July 25, 2016, 6:15 am

Nice tutorial! Thanks Yayhar :)

YayHar - September 2, 2016, 1:41 pm

Let me know what else you would like to see, I would love to write it.

Client User - September 3, 2016, 4:59 am

thanks love you i had it searched a ling time

Angel shanu - September 3, 2016, 9:20 am

thanks sir for the tutorial, keep posting

ghost1192 - September 4, 2016, 2:57 am

where is the generated file located?

Kisame? - September 4, 2016, 4:13 am

Nice tutorial from YayHar, our lord and saviour. Constantly contributing to this community for free, give this man a rep.

skidhackz - September 4, 2016, 6:24 am

From all the tricks of your spreading methods I find this the most useful

It's hard to say, as in my experiences it has saved to different locations on different machines.

If you want to find out where for your machine, when you execute the command, once it is finished at the bottom of command prompt it will say "index.html" saved or whatever it saved as. Just search that using windows search and right click, and view file location.

Black Kodak - September 7, 2016, 6:36 pm

Nice tut post YarHar :-)

Keep up the TUTORIALS

YayHar - September 20, 2016, 4:04 pm

Let me know if you guys need any help, I'm online and ready to answer questions.
