Thread: [Pokemon Go Spawn Map ! See every pokemons around you](#)

Ragnex - July 17, 2016, 7:01 am

PS: Do not use ur main accounts on cmd just create one from [there](#)

Hi there this setup is showing you pokemons around you with google maps.

First of all, it looks like this: <https://i.imgur.com/oAXCMYk.png>

SETUP:

- 1) [Download](#) Python 2.7.12
- 2) Install it, default location in C drive is fine.
- 3) [Download](#) this pokemon go folder. // [updates](#)
- 4) Extract the contents to C:/Pokemongo
- 5) Go to your Python scripts folder (C:/Python27/Scripts) and copy pip.exe to your C:/Pokemongo folder.

6) Press Windows Key + S and type CMD and press enter

7) First please update your python with typing these codes(one by one) to cmd

```
cd C:/Python27
```

```
python -m pip install --upgrade pip
```

after the update go again cd C:/Python27 and type these codes (one by one)

```
pip install protobuf  
pip install requests  
pip install flask-googlemaps  
pip install s2sphere  
pip install requests  
pip install flask
```

8) Now close and open cmd again and type the codes one by one

```
cd C:/Pokemongo  
pip install -r requirements.txt
```

9) Open again cmd after installation and type cd C:/Pokemongo

```
example.py -u USERNAME -p PASSWORD -l "SYDNEY, AUSTRALIA or loc REPLACE THE  
CRAP HERE" -st INPUTANUMBERBETWEEN5-10
```

Example: example.py -u derp -p derpina -l "-33.85917940190019, 151.21322393417358" -st 10

10) Now go to <http://127.0.0.1:5000> and it's running :)

Optional Upgrades to this Setup

How to see the location of pokemon on map

- 1) open example.py with editor
- 2) replace "'infobox': pokemon[1]" with 'infobox': pokemon[1]+' '+str(pokemon[-2])+', '+str(pokemon[-1])

QUICK TIP

Guys, you can create a .bat with notepad for entering quickly to the map without using cmd.

```
c:\  
cd C:\Pokemongo  
start python example.py -u username -p password -l "41.048754, 28.991607" -st 10  
start chrome.exe http://localhost:5000/  
pause
```

* change username, password and location and save the notepad file as a pokemonmap.bat

Now just click to pokemonmap.bat to enter map :)

[Good Luck & Have Fun](#)

(Jul 17, 2016 07:14 AM)PAIN Wrote: [\[CITE\]](#) Make a pokemon trainer account

With the exciting launch of Pokémon GO, there's an overwhelming demand for new Pokémon Trainer Club accounts. Our team is hard at work improving the sign-up process. Until the work is complete, for a brief time, we'll be limiting the number of new accounts that can be created simultaneously. If you're unable to create an account at this time, please try again in an hour.

Pain - July 17, 2016, 7:19 am

(Jul 17, 2016 08:56 AM)b?xxy Wrote: [\[CITE\]](#) Would this be detected in any way?

They said: Don't use your main account. Just create a new Pokemon Club account and use that.

Ragnex - July 17, 2016, 8:59 am

(Jul 17, 2016 08:56 AM)b?xxy Wrote: [\[CITE\]](#) Would this be detected in any way?

If they detect it, they will ban your account that you use in this setup. This is the reason that we are

using new accounts for this setup. We lose nothing if they detect and ban.

woms - July 17, 2016, 8:59 am

(Jul 17, 2016 08:47 AM)Fictional Wrote: [\[CITE\]](#) Yo m8, ain't no virgin scripter like u breh. Get out of ya cave instead and get some laid lmaoooo ??

edit: great banter m9, appreciate your kind words

Fatboy Slim - July 17, 2016, 9:03 am

Nice guide my man, it's loading as we speak, will update when it's completed. Am looking forward to see what pokemon are in my area. I live pretty far away from the city so I'm not hoping for much but still.

ven0m - July 17, 2016, 9:04 am

Did anyone got banned using this or any thing else? Just wanted to make sure. Thanks for the contribution by the way.

Fatboy Slim - July 17, 2016, 9:04 am

(Jul 17, 2016 09:04 AM)ven0m Wrote: [\[CITE\]](#) Did anyone got banned using this or any thing else? Just wanted to make sure. Thanks for the contribution by the way.

Well it would be pretty stupid to do this with your main account, just make a new one real quick. I think chances are you're gonna get banned by doing this so I wouldn't take the risk if I were you.

Ragnex - July 17, 2016, 9:05 am

(Jul 17, 2016 09:04 AM)ven0m Wrote: [\[CITE\]](#) Did anyone got banned using this or any thing else? Just wanted to make sure. Thanks for the contribution by the way.

Dude just create a new account for this setup, so if they ban, u lose nothing

Windows - July 17, 2016, 9:06 am

Great guide, I will test it later tonight and I will report back if I get any.

This is actually great because you could probably find really rare Pokemono with this guide.

Fatboy Slim - July 17, 2016, 9:13 am

It worked great when I tried with my own location but now I get an error: IndexError: List index out of range. Not exactly sure what this means, any thoughts?

Confound - July 17, 2016, 9:16 am

Hmm this definitely seems extremely interesting, but it also looks pretty complicated :p That said, Ill definitely take a look at this method, and see if its worth the time to use. Dealing with code has never been my strong suit so this one will be a little interesting..

BTCEXchangez - July 17, 2016, 9:29 am

Seems like the servers are down

?Üta? - July 17, 2016, 9:40 am

IM gonna give this a go as I have around 3 different pokemon club accounts. Ill post back here when I am able with an update.

Unknown001 - July 17, 2016, 9:43 am

Gonna check this out seems interesting, I have no pokemon club account though so I guess I'll have to wait untill it's open for registration again. Would you be able to put it online for other people to access this aswell? might be funny to do imo.

2Chewz - July 17, 2016, 9:45 am

(Jul 17, 2016 09:40 AM)?Üta? Wrote: [\[CITE\]](#) IM gonna give this a go as I have around 3 different pokemon club accounts. Ill post back here when I am able with an update.

Ganja - July 17, 2016, 9:51 am

So.. is anyone able to create a web-app for this? Hit me up if you need hosting or anything !

2Chewz - July 17, 2016, 9:52 am

(Jul 17, 2016 09:51 AM)? Royal Wrote: [\[CITE\]](#) So.. is anyone able to create a web-app for this? Hit me up if you need hosting or anything !

I think this is localized to your account, so you would only be able to look at one place.

Ganja - July 17, 2016, 9:54 am

(Jul 17, 2016 09:52 AM)2 Chewz Wrote: [\[CITE\]](#) I think this is localized to your account, so you would only be able to look at one place.

what if visitors just have to login with a fresh account to check out their area? (no idea if this is a stupid question, this python stuff is too advanced for me).

Confound - July 17, 2016, 9:54 am

Is there a way you can figure this out for mac? Would be pretty nice if mac users had something similar to this. I am going to be testing out the location spoofer later, but it would be useful to know where certain pokemon are. Thanks!

2Chewz - July 17, 2016, 9:55 am

(Jul 17, 2016 09:54 AM)? Royal Wrote: [\[CITE\]](#) what if visitors just have to login with a fresh account to check out their area? (no idea if this is a stupid question, this python stuff is too advanced for me).

Another problem would be the fact that you have to input your coordinates to see it. You'd have to rewrite the code for every visitor.

Ganja - July 17, 2016, 9:56 am

(Jul 17, 2016 09:55 AM)Fictional Wrote: [\[CITE\]](#) Pretty sure Pokemon accounts isn't even limited to any areas as the game uses GPS to even track your area. So I'm pretty sure someone can literally host a server for this.

Do you know anyone who would be able to create this (for pay even) ?

BTCEXchangez - July 17, 2016, 9:56 am

Ayy

2Chewz - July 17, 2016, 9:56 am

(Jul 17, 2016 09:55 AM)Fictional Wrote: [\[CITE\]](#) Pretty sure Pokemon accounts isn't even limited to any areas as the game uses GPS to even track your area. So I'm pretty sure someone can literally host a server for this.

You'd run into the problem of being banned for teleporting.

Raddify - July 17, 2016, 9:57 am

so it ends up looking like this

<https://www.google.com/maps/d/u/0/viewer?mid=1mA00u2SuvuNtGCifo0E-BVzTTWc>

Fatboy Slim - July 17, 2016, 9:59 am

What even causes the JSON error where it says no object could be decoded, and why is it normal? I'm wondering why I only got it to work once.

2Chewz - July 17, 2016, 9:59 am

(Jul 17, 2016 09:57 AM)Raddify Wrote: [\[CITE\]](#) so it ends up looking like this
<https://www.google.com/maps/d/u/0/viewer?mid=1mA00u2SuvuNtGCifo0E-BVzTTWc>
Kind of like that, but updates where they actually are in realtime.

Raddify - July 17, 2016, 10:00 am

(Jul 17, 2016 09:55 AM)2 Chewz Wrote: [\[CITE\]](#) Another problem would be the fact that you have to input your coordinates to see it. You'd have to rewrite the code for every visitor.
or just have it where google maps pop up, you select where you are, and input the coords

BTCEXchangez - July 17, 2016, 10:01 am

(Jul 17, 2016 09:59 AM)Fatboy Slim Wrote: [\[CITE\]](#) What even causes the JSON error where it says no object could be decoded, and why is it normal? I'm wondering why I only got it to work once. Try again, servers are down anyways so don't bother atm.

2Chewz - July 17, 2016, 10:02 am

(Jul 17, 2016 10:00 AM)Raddify Wrote: [\[CITE\]](#) or just have it where google maps pop up, you select where you are, and input the coords
I guess you could write a script that takes a set of input usernames, passwords, coordinates and rewrites the code for each visitor.

Wondering if the higher level you are the better Pokemons you would find, so if using a new account would mean you'd only catch low level pokemons?

I could be wrong, but I believe the only thing that's influenced by your level is the CP of the Pokemon you see. If the second Pokemon you run into is a Gyarados, it's probably going to be 10CP, but you can still catch it.

Reward - July 17, 2016, 10:59 am

No you only use your new account for pokemon places, while playing game and try to catch the

pokemon from your main account, pokemon's CPs are probably related to your main account's level not ur map account. All in all you can still catch high cp pokemons

SIM-1729678 - July 17, 2016, 11:08 am

(Jul 17, 2016 11:10 AM)Fictional Wrote: [\[CITE\]](#) I think this is cause of the API being down (Servers being down), so you gotta just wait mate also this program while it being good and all I recommend using the Pokemon Club account leveling it to a decent level to be able to find even better Pokemons I guess?

The only thing your level in the game affects is the CP of the pokemon you encounter & hatch, Anyone could find a charizard being a lvl 1 or a lvl 20 it doesn't matter the only difference is going to be the CP on that charizard. There is not really a point in leveling the account since you will be using another account to catch the pokemon since the other one could get banned.

Ragnex - July 17, 2016, 11:16 am

No m8 everyone see same pokemons on same places even if one of the account is 3 and the other is 25. The only thing that different between these accounts is CPs of the pokemons

Ricy - July 17, 2016, 11:21 am

Lol, no idea if I did it correct, seems like RPC server is offline?

Can someone tell me if this is setup correct , or is there an issue on my side?

After I retried it, It gave me a bunch of errors which included

AttributeError

AttributeError: 'NoneType' object has no attribute 'unknown7'

:/

I don't think that's how it works. You find the same pokemon only the CP varies when there's another person viewing it. But it will still be the same pokemon for everyone.

goldi123 - July 17, 2016, 11:24 am

Its works for me now. Just ctrl +c in CMD window a few times then it works.... its because of the shitty servers.

Flaming Hot Cheetos - July 17, 2016, 12:57 pm

Thanks for this method op lol

Evanescence - July 17, 2016, 12:59 pm

The servers need to stop going down so I can do some more testing with this. If possible I think a great feature with this program would be to set a location, radius, and the Pokemon you want and it keeps monitoring that area until it sees the Pokemon you search and alerts you somehow. Like

maybe have Philips Hue alert option to make your lights blink red when it finds the Pokemon you want ?

Manwë - July 17, 2016, 1:00 pm

This is actually very clever. I'll try it when the servers gets back up. Thanks a lot. :)

Fliiix - July 17, 2016, 1:00 pm

I'm keep getting this error <https://i.gyazo.com/254e5e3c27573237576dbebe2dcec4e3.png>

Does anyone know how to fix it? Thanks

CHAOS - July 17, 2016, 1:01 pm

Thanks for the share op, gonna try this out now.

Blackheart' - July 17, 2016, 1:02 pm

someone now the problem to this?

You can do that, but it would be a personal map, doesn't work for anyone else.

It works by pretending you're in the game playing, then gathering location info from the game.

Mr. Robot - July 17, 2016, 3:41 pm

(Jul 17, 2016 03:26 PM)2 Chewz Wrote: [\[CITE\]](#) You can do that, but it would be a personal map, doesn't work for anyone else.

The reliance of flask for this script is really bad, flask is only good if everything is already predefined for a server.

<https://github.com/memelyfe/pokemongo-api-demo/tree/maps>

Try this one instead. It's easier to setup, and has more features. All it needs is a google maps api key.

Evanescence - July 18, 2016, 12:16 am

How hard would it be to get it to alert me when certain Pokemon pop up? Like maybe flash my Phillip's Hue lights red? ?

Djlatino - July 18, 2016, 1:21 am

(Jul 18, 2016 01:19 AM)Evanescence Wrote: [\[CITE\]](#) How hard would it be to get it to alert me when certain Pokemon pop up? Like maybe flash my Phillip's Hue lights red? ?

Not too hard actually LOL I was thinking of trying to implement a SMS notification system with google maps linked when something you want is found, we'll see if I get some time this week.

Fatboy Slim - July 18, 2016, 1:26 am

(Jul 18, 2016 01:22 AM)Fictional Wrote: [\[CITE\]](#) Anyone know if better Pokemons only show up to higher level accs or if the level one throwaway acc im using with this program is sufficient enough to get me dem rares babyyyy.

The level does not impact the encounters, only the CP varies. In other words it's based on the cell activity and not on your account.

Fatboy Slim - July 18, 2016, 1:35 am

(Jul 18, 2016 01:27 AM)Shame Wrote: [\[CITE\]](#) I think they show up if you're level 5+ more often but before then they're still possible to find. Try to get the account up a couple levels as I think they'll also be a lot easier to catch if you have a higher level, not to mention you get balls that have better capture rates when you level up.

I'm not really sure you completely get what this tool is about... Or how the system works for that matter. Everyone has the same encounters.

(Jul 18, 2016 01:29 AM)Fictional Wrote: [\[CITE\]](#) Mmmmm i'm going to fucking rape this app then lmaoooo, RIP all the gyms in Sweden. I'm gonna fuck em up with 20 gyarados lel.

Good luck with that because you'll have to spend quite some time getting 20 Gyarados

Fatboy Slim - July 18, 2016, 1:42 am

(Jul 18, 2016 01:38 AM)Fictional Wrote: [\[CITE\]](#) Mm with this app mayb 1 hr for 20 gyas no problem lmao, honestly there aren't good rares in my city gonna try spoofing to other cities soon may help me.

It's not because you know what Pokémons are in your area that you know where gyarados is, which I don't think even spawns on itself. So good luck catching about 40 Magikarps ;)

Dastoks - July 18, 2016, 3:09 am

How does it eork exactly? I mean, how can he know theres an actual venusaur there and not just guessing? It seems abit weird but mabye its because i dont really know phyton.

DamienVC - July 18, 2016, 3:11 am

Will do this when I have some time. I recall missing like over 100 rare Pokemon over the time I was

driving around. Meh. Seems like I could've gotten them all.

Fatboy Slim - July 18, 2016, 3:13 am

(Jul 18, 2016 03:09 AM)Dastoks Wrote: [\[CITE\]](#) How does it eork exactly? I mean, how can he know theres an actual venusaur there and not just guessing? It seems abit weird but mabye its because i dont really know phyton.

It doesn't really have anything to do with python. The source for the app has been released so that's probably what the program is based on. Although I'm not really sure.

Prince of all Saiyans - July 18, 2016, 3:20 am

With a little bit of tampering managed to get this working on my mac :9 Thanks for posting this!

TheChi?f - July 18, 2016, 3:20 am

It worked jesus christ LOL
Have fun.

I try to find a way to use this while I am outside. Don't want to use fake GPS on my legit lvl 23 account.

Dessie - July 18, 2016, 8:48 pm

So anyway to see the cords for each pokemon?

Death Gun? - July 18, 2016, 8:57 pm

(Jul 18, 2016 08:45 PM)FlowDesigns Wrote: [\[CITE\]](#) Have fun.

I try to find a way to use this while I am outside. Don't want to use fake GPS on my legit lvl 23 account.

You could set up a bot to manually refresh the map on your PC and use TeamViewer on your phone while playing Pokemon Go.

Edit: How do you see where the Gyms are? The icons don't show for me.

Mcsugarface - July 18, 2016, 9:06 pm

when i do step 8 it gives me a fatal error any help anyone on how to fix?

FlowDesigns - July 18, 2016, 9:12 pm

(Jul 18, 2016 08:57 PM)Death the Kid????? Wrote: [\[CITE\]](#) You could set up a bot to manually refresh the map on your PC and use TeamViewer on your phone while playing Pokemon Go.

Add -dp after the coords to the batch file. ... " 453535 342342" -dp ...

Death Gun? - July 18, 2016, 9:14 pm

(Jul 18, 2016 09:07 PM)Fictional Wrote: [\[CITE\]](#) A bot that manually refreshes? I think you're meant to say automatically refreshes but I may be wrong, i'm foreign pls dont hurt.

Ah yes, I meant automatically. Sorry, when I was typing that out I was trying to fix the map. But yeah, a bot that automatically refreshes every 10 seconds or so would be nice. Which, I believe most Browsers have an add-on that does that.

FlowDesigns - July 18, 2016, 9:14 pm

(Jul 18, 2016 09:06 PM)Mcsugarface Wrote: [\[CITE\]](#) when i do step 8 it gives me a fatal error any help anyone on how to fix?

Give me a screenshot of your C:/Pokemongo folder.

Make sure you installed Pip correctly, and if you did, make sure the requirements.txt is in the folder C:\Pokemongo. If it's anywhere else like on your desktop it won't work.

sevv - July 18, 2016, 10:47 pm

(Jul 18, 2016 10:40 PM)Jozeph Wrote: [\[CITE\]](#) Make sure you installed Pip correctly, and if you did, make sure the requirements.txt is in the folder C:\Pokemongo. If it's anywhere else like on your desktop it won't work.

Is this correct? <https://gyazo.com/e27c57803e954ea19bec786d7530eb8f>

Elegant - July 18, 2016, 10:47 pm

Hmm this definitely seems extremely interesting, but it also looks pretty complicated :p That said, Ill definitely take a look at this method, and see if its worth the time to use. Dealing with code has never been my strong suit so this one will be a little interesting..

Death Gun? - July 18, 2016, 10:49 pm

Dealing with code has never been my strong suit so this one will be a little interesting..

It can actually be done in less than 5 minutes. I ended up skipping one of the steps for it and got it working a lot quicker.

Zbow - July 18, 2016, 11:16 pm

```
C:\Pokemongo>python example.py -u Zbow -p Password -l "HAVETHECOORDINATESCORRECT"
-st 10 -ar 10
python: can't open file 'example.py': [Errno 2] No such file or directory
```

My example.py file is placed correctly in the Pokemongo folder in the C drive, however it cannot be located for some odd reason? Also I had to use python instead of pip to execute any of the earlier commands.

DooSaM - July 19, 2016, 12:07 am

Someone should make a quick video tutorial for all the scrubs out there such as myself. :D
Gonna try this later thanks for sharing!

By servers I am referring to the map as mine is not loading. Holy shit you're stupid.

Lovely? - July 19, 2016, 10:51 am

(Jul 19, 2016 10:49 AM)Dro Wrote: [\[CITE\]](#) so your telling me every time your game goes down because the server isnt responding your gonna ask this thread when the title of this thread is all about a pokemon hack not the server status of the game. you need the server to be up to be playing the game. like I said go look up a pokemon go server status webpage on google its way more reliable than someones word on here and you get the answer instantly

Where did i tell you that? Are you mildly retarded?

Just implied that you need the servers to be up.

Dro - July 19, 2016, 11:05 am

you two can justify your stupidity all you want dont ask for pokemongo server status in this thread. is

there a way to make the loops for searching pokemon become unlimited?

leagueofgoku - July 19, 2016, 11:27 am

I'm stuck here:

```
replace "'infobox': pokemon[1]" with 'infobox': pokemon[1]+' '+str(pokemon[-2])+',  
' +str(pokemon[-1])
```

when I go into editor theres no such line?

ThatsComplex - July 19, 2016, 11:33 am

(Jul 19, 2016 11:27 AM)leagueofgoku Wrote: [\[CITE\]](#) I'm stuck here:

```
replace "'infobox': pokemon[1]" with 'infobox': pokemon[1]+' '+str(pokemon[-2])+',  
' +str(pokemon[-1])
```

when I go into editor theres no such line? click on edit and click on find and type "infobox" should show you where that line is, i had issues after doing that part though im going to try again later

alex20501 - July 19, 2016, 11:37 am

For those who wants to access the map outside your home, just add replace this line in your batch file:

```
start python example.py -u LOGIN -p PASSWORD -l "LAT, LONG" -st 8
```

to

```
start python example.py -u LOGIN -p PASSWORD -l "LAT, LONG" -st 8 --host=0.0.0.0
```

Gamingz - July 19, 2016, 11:39 am

is there a video tutorial because im doing exactly what this guy says and half this shit doesnt work and im getting like 50 error messages

it always says [-] retrying_api_req: request error (Unexpected end-group tag.), retrying

If you're using the latest version of the map, you don't need to do that.

dirtground - July 19, 2016, 12:03 pm

The map seems to be empty for me? Is it supposed to be like that or am I missing something?

xmagepurx - July 19, 2016, 12:19 pm

The map relies on the PokemonGo servers. Theyre running a little slow right now. So if youre having issues, this is the reason.

Long Morrison - July 19, 2016, 12:20 pm

ffs just use old version, its faster.

this tut might work on newer one too.

easy as fuck, here's tutorial for full install;

1. download python from OP's link

2. install and select ALL features, last one adds python to %path% !important!

3. download [this](#), its older version with updated API key.

4. open cmd on extracted directory (Shift+right click), paste this pip install -r requirements.txt

5. then type python example.py -u username -p password -l "location" -st 4 -ar 60

You can use any location what google maps find, steps (st) are radius, over 10 takes pretty long. ar is update time.

If there is any problem, you probably did something wrong.

python/pip not recognized means you didnt do step 2 right, scroll down feature list on python install and enable %path%.

[_] retrying_api_req: request error (Unexpected end-group tag.), retrying means servers are busy, it still works, at least for me.

thx bro for this useful tip !!! it works fine. thx again

Evanescence - July 19, 2016, 1:53 pm

I'm trying to scan my area for Pokemon, but the servers keep going down. Niantic/Nintendo is making an assload of money on this game and they can't even fix the servers. ?

Lovely? - July 19, 2016, 1:55 pm

(Jul 19, 2016 01:53 PM)Evanescence Wrote: [\[CITE\]](#) I'm trying to scan my area for Pokemon, but the servers keep going down. Niantic/Nintendo is making an assload of money on this game and they can't even fix the servers. ?

I'm quite sure they're working on it, they're gone way more stable the past week. Can't be easy to somehow be hit by a massive audience and then have to upgrade a lot.

Mr. Corleone - July 19, 2016, 1:57 pm

(Jul 19, 2016 01:55 PM)Lovely? Wrote: [\[CITE\]](#) I'm quite sure they're working on it, they're gone way more stable the past week. Can't be easy to somehow be hit by a massive audience and then have to upgrade a lot.
Yaeh ^ true. The problem is the servers were stable untill they released it in almost all countries 2 days ago, They said they didn't expect so many peolpe to hop on it so they have to re-work on

servers lmao..

Fatboy Slim - July 19, 2016, 1:58 pm

I don't think most of y'all get what comes looking when a new server needs to be added. It's not just plug and play.

Clegane - July 19, 2016, 2:01 pm

posting to check this out later, looks like a great tip, definitely gonna be really helpful. Thanks OP!

Siid - July 19, 2016, 2:01 pm

Hey guys, do you know if there is a way to do it on smartphone ??

Mr. Corleone - July 19, 2016, 2:02 pm

(Jul 19, 2016 02:01 PM)Siid Wrote: [\[CITE\]](#) Hey guys, do you know if there is a way to do it on smartphone ??

I am not sure if it works on smartphone, but there was a member that made it so that you can look this up online on his website. You could open up that website while you are outside and it would still work :P

FEAROFGODRS - July 19, 2016, 2:03 pm

Will check this out, How accurate is this? I started to use the ingress map but that isn't very accurate

Mr. Corleone - July 19, 2016, 2:04 pm

(Jul 19, 2016 02:03 PM)FEAROFGODRS Wrote: [\[CITE\]](#) Will check this out, How accurate is this? I started to use the ingress map but that isn't very accurate

This is 100% accurate. This will also show the time it is on the map and how long it will stay. It also shows all pokestops and gyms around you, just give it a try and you will see it.

Evanescence - July 19, 2016, 2:09 pm

I keep getting the error "API request error, retrying". Does anyone know how I can fix that?

I'm not using the scanner posted in the OP, but can anyone tell me why I get this after scanning for a while? I'm using this scanner: <https://github.com/memelyfe/pokemongo-api-demo/tree/maps>
Spoiler ([Click to View](#))

Silfy - July 19, 2016, 11:16 pm

If anyone finds a working way to get this on mobile, please let me know, still not 100% on how I should go about doing this.

Evanescence - July 19, 2016, 11:43 pm

Fuck yeah! I missed a Snorlax, but about an hour later this guy spawned! Hopefully I catch him and he doesn't run away! Wish me luck!

daaman - July 20, 2016, 1:05 am

I have a slight issue - The scanner seems to be running fine, but after 15-20 min or so the map stops receiving new pokemon. The scanner keeps on chugging along, and it keeps deleting the old ones, but no new ones are added. This results in me eventually having an empty map to look at, even though the scanner seems to be working fine.

Anyone know whats causing it?

Siid - July 20, 2016, 1:13 am

You can do it online here : <http://maps.ddosed.xyz/maps>

Ok let me rephrase that. I think you will get banned. Reason for this is the amount of temp bans, and reputation Niantic has build up with Ingress for being really light in the ban hammer. What this script does is constantly teleporting you over the location provided looking for pokemon spawn while catching none. This behaviour is extremely easy detectable.

ur girls daddy - July 20, 2016, 4:19 am

Is there any way to leave this fucker running 24/7 so I don't have to restart it each time it loops?

I wanna be able to turn it on my computer and then go hunting irl with the map on my phone, but the map becomes empty after a few hours.

(Jul 20, 2016 04:19 AM)b00mh3adsh0t Wrote: [\[CITE\]](#) Is there any way to leave this fucker running 24/7 so I don't have to restart it each time it loops?

I wanna be able to turn it on my computer and then go hunting irl with the map on my phone, but the map becomes empty after a few hours.

You could use my website (check my thread)

Use remote desktop to restart it after a while?

I don't wanna use others' stuff. Rather keep my shit private. But thanks for the offer.

(Jul 20, 2016 04:23 AM)Fatboy Slim Wrote: [\[CITE\]](#) Use remote desktop to restart it after a while? I would do that if I wasn't lazy, I want everything in my life automated and this is definitely one of them.

Literally everything is working fine except the maps empty after a few hours until I restart the scanner.

(Jul 20, 2016 03:30 AM)Randelixim Wrote: [\[CITE\]](#) First of all how do you know for 'sure' that it will get banned?

Did someone else get banned for this? Is there proof?

Niantic will be seeing requests from your phone as well as requests from your computer. Two different location requests simultaneously with one account. You're going to risk a ban.

Dro - July 20, 2016, 8:02 am

anyone know a 100% way to make the searching pokemon looping to make it go forever and keep looping. after a little bit it stops looping. if theres a 100% way to keep it from stopping please someone send me the code

One way is to make a batch script to automatically restart it every few minutes. But that's a shitty temporary solution.

(Jul 20, 2016 09:59 AM)b00mh3adsh0t Wrote: [\[CITE\]](#) One way is to make a batch script to automatically restart it every few minutes. But that's a shitty temporary solution. I got this

Quote:taskkill /IM python.exe

```
c:\
cd C:\Pokemongo
start python example.py -yourstuff
start python example.py -yourstuff 2
start python example.py -yourstuff 3 on a 20 min timer on my task planner/manager
```

Works great, but I'd like to have a cleaner solution

Evanescence - July 20, 2016, 6:28 pm

Ok, I'm having an issue with one of the scanners that was posted in this thread. The SetLocation.bat seems to be working (The green one), but the SetMap (The white one) doesn't seem to be updating it on the local HTTP server on 127.0.0.1:8000. Does anyone know how I could fix this? [\(Click to View\)](#)

EDIT: I found a fix for it. All you have to do is redownload the files and replace them. Make sure to put your API key back into the config.json file after redownloading. ?

This is the scanner I'm using by the way:
<https://github.com/memelyfe/pokemongo-api-demo/tree/maps>

AnonymousRevenge - July 20, 2016, 6:43 pm

This looks like such a good method. Thanks man.

Is it possible to put multiple locations on the same map with this?

Krule - July 21, 2016, 1:55 am

Nice guide my man, it's loading as we speak, will update when it's completed. Am looking forward to see what pokemon are in my area. I live pretty far away from the city so I'm not hoping for much but still.

King??? - July 21, 2016, 2:44 am

If anyone is looking for a browser based version, make sure to check out:

zalando - July 21, 2016, 3:42 am

Is there any possibility to get this going somewhere else then on localhost? F.e. sending the snapshots from the computer to your phone. Oh, and thanks for the guide! :)

ur girls daddy - July 21, 2016, 5:42 am

You could open your ports and setup a dns to easily access it from the phone.

Krule - July 21, 2016, 5:51 am

Gonna ask this question here too:

Wondering if the higher level you are the better Pokemons you would find, so if using a new account would mean you'd only catch low level pokemons?

King??? - July 21, 2016, 5:53 am

Low CP level pokemon, but the type of Pokemon isn't affected

I see I see, thank you for answering my question. However, another thing is are there other pokestops besides churches? I'm tired of people thinking i'm there to praise the lord.

Long Morrison - July 21, 2016, 7:08 am

If anyone needs help with this Im happy to help.

Just bought hosting for year to use this ?

Krule - July 21, 2016, 7:09 am

Lol, this is fucking great. I'm gonna get it set up right now, does it show exact geolocations for the Pokemons so I can GPSspooft it all?

ur girls daddy - July 21, 2016, 10:07 am

Damn I wish I could do online purchases, 4 more months. I just use a laptop in my wardrobe as a server for this.

?Stark - July 22, 2016, 1:04 am

thanks bro i will use on my linux

???????? - July 22, 2016, 2:43 am

getting some errors no, it worked like a charm last night but now im getting the following error over and over again.

retrying_get_profile: get_profile returned no-len payload, retrying.

The servers are down right now so that's probably your issue.

got it working again, but thanks for the response :)

is it possible to log in using google account instead of PTC?

FarMuf - July 23, 2016, 8:52 am

Hi I get through step 8 can then once i start step 9 it says exmaple.py isnt an internal or external commands something to that sort. Any ideas on how to fix this. I did every step correctly there wasn't an error message.

Long Morrison - July 23, 2016, 11:01 am

Add python to %path%, or reinstall it with all features.

ur girls daddy - July 24, 2016, 8:22 am
