Thread: [\[Dartrack 4 Alien\] server.exe not working :\(](#)

v47093 - July 17, 2016, 8:52 am

So I followed the official guide (by #BzRk) with working dns and port forwarding settings, tested the server file on virtualbox and sandboxie and nothing surprises me--(my bad :(

-Then a Massive Guide by #Purple Kief got my eye, I double checked each step and applied on my way to setup. --(Damn! it didn't work , nothing happened_no new connection)

Helping words will be truly appreciated, I know guys here are good at what they know

Steps I did and applied --

- *Guessed a port number and password for client
 - *Forwarded the port with my router(NAT Virtual Circuit) successfully
 - *canyouseeme.org says "I can see your service on port \$\$\$\$____man"
 - *Setup fagdns.su and ping successfully
 - *And rest is same as Kief's way
- <https://hackforums.net/showthread.php?tid=5327327>

So mates help me find my mistake[/align]

Purple Kief - July 17, 2016, 8:53 am

If you followed both of our guides that means your .exe will work just fine.

Test on a computer OUTSIDE of your network to get proper results.

Check your port if its really open with Portforward google it!

Here you can be a 100% sure if the port is open or not..

Yes its open, as you said i checked with Portforward utilities

Damn, what may be wrong then :/

Like #Purple Kief said, tested the server on another PC, still no luck :/

I should switch RAT program, i guess and will test again. Till then anyone has a suggestion please
