??e rando? d??c? g?y - July 19, 2016, 6:48 am

The Pokémon API is unstable atm, Just give my server a minute to update all the pokemon

I'm currently offering a free list of Pokemon maps for everyone!

Current Maps Online:Maps moved to <http://pokeposition.com/>

Backup URL <http://ddosed.xyz/>

Want to add your location? Just visit the website and add your location! Then wait a few minutes for our server to process your request.

Everything is automated! You dont have to post your location in the thread because i will not add them manualy (Just wait for the queue to cl

Everything is automated. The reason there is a queue is because i have limited server resources, Putting all maps online at once will lagg everything out. Just check the Database Update timer in the top left to see when the server will be done.

Oh, I understand that they'll take time. It's just such an awesome project (the first of its kind that I've seen that doesn't rely on user input) and I can see this going huge and soon. If this is shared on places like reddit or other PokemonGo related places, you're going to have a MASSIVE increase in traffic that will probably take everything down.

Very nice OP. IF possible, consider cloning this set up for a paid service, eventually all slots will be used up on the page you could then have a potential customer base interested in having access to thier map, anytime 24 hours a day 7 days a week, these said people may actually pay for a dedicated spot for them selves. Just an idea to ponder on, sell weekly slots, it'll pay for both versions of your site and your time im sure.

It was set for 2.2 km as a diameter (I believe) then he changed it to 9 km where it still stands now. Apparently it's on the PoGo side that it doesn't load quick enough for that range so 9 km never actually full loads.

The site is up, the API is slow, also depends what maps you're looking at. If you're looking at the Central Park one it should load fine. Each time the database updates, the maps do as well so you'd have to wait a couple minutes before you see everything on the map, they slowly show up.

Can you make the removal time longer than 25 minutes?

The Removal Timer is 25 minutes (Just revisit/refresh the page and the timer will reset) because of server resources, I can currently host around 80 live maps at once before my servers is out of memory. Will be adding some adds soon to generate a income to keep the server up or add more servers

Yeah, But it gets annoying when you go to the shop for like 30 minutes and then the map is removed then you need to wait about 10 minutes for all the pokemon to respawn again.

I'm offering this for free, I cannot make the alive time longer because of (like i said) Server resources. Once i get approved for adsense ill change the timers etc, For now just refresh the page once every 25 minutes if you want to keep using it xD

Thats because the pokemon API servers are unsable.. Sometimes it takes a little bit longer.

LilDurk - July 20, 2016, 7:39 am

Thanks to this I've caught some OG pokeman man, thanks for the great service.

I see this going viral in a few days/weeks though. Good luck!

Shorta - July 20, 2016, 7:47 am

Thanks so MUCH for this! Caught a Snorlax 1400 CP with it. This is truly amazing.

This is amazing, thank you :)

Yoinked - July 20, 2016, 8:35 am

I'm not sure if its just the API but this doesn't seem to be working on mobile yet sadly.

Klima - July 20, 2016, 8:39 am

Thanks for sharing, the only problem is the stability of the servers ?

It does, just takes a while to load up! Leave it on the screen and it will!

AsunaYuuki - July 20, 2016, 9:51 am

On mobile the map is very small, is there anyway to change this?

The Pokemon servers are currently very unstable, Try it again later.

Supportyourlocal - July 20, 2016, 11:38 am

This is pure GOLD! Vouch for you my man +rep

OFFTOPIC: If anyone finds any rare pokemon please be sure to tell us the location !

Nostre - July 20, 2016, 12:08 pm

Currently says the server is offline or unavailable, which sucks. I will check back later, hopefully it will work, I will most definitely walk around this weekend.

Yoinked - July 20, 2016, 12:29 pm

Hopefully the update doesn't fuck this. It shouldn't because apparently there aren't that many big changes.

I'm loving this though it's fucking great, I'm getting ready to evolve Bulbasaur, Charamander, and I caught a Snorlax last night lmao. I also encountered a Charmeleon but it was too fucking hard to catch lol. When you are GPS spoofing this is golden. If I ever get softbanned I use another alt using this to collect rare Pokemon so I can trade later on when the game gets trade functionality.

findingnature - July 20, 2016, 12:55 pm

This is pretty cool to be completely honest. Nice job on the website, I'm sure if you were to monetize it correctly you could make some serious cash.

Good luck!

Nostre - July 20, 2016, 3:07 pm

Seems to not be working still. Guess we'll just have to wait for the servers to be stable. I was looking forward to seeing the Pokemon in my city.

AsunaYuuki - July 20, 2016, 3:47 pm

Yeah it definitely does work, just servers are down as usual.

VirtualFrost - July 20, 2016, 8:04 pm

Site has always been working for me except that time you were in the middle of bug fixes. Generally, I wait 5 minutes with the map open and it fills up with pokemon. I understand that it'd be slow but still very handy.

2Chewz - July 20, 2016, 8:29 pm

The server is refusing connection for me right now.

Edit: nvm, it works.

(Jul 20, 2016 08:42 PM)Gummy Bear Wrote: [\[CITE\]](#) Is it down atm or what? the location I added is their but no Pokemon are showing up?

Wait for the map to refresh. It refreshes every 10 minutes.

I have a huge server if you want to host it on there. My specs cost about \$2k+ so it should be able to handle some things

Krule - July 21, 2016, 6:42 pm

Okay cool, thanks for making this! Any way to turn this into an app? I'm looking for a business partner for developing a pokemon companion app if you'd be interested check my thread on it.

VirtualFrost - July 21, 2016, 6:47 pm

One suggestion, now that I'm seeing the website becoming popular, it's full, however I've seen like the same location using up 3 slots, would there be a way to notify that there may already be a similar map, or merge them all as one?
