Thread: [Darkcomet not showing any Users](#)

DePeep - July 20, 2016, 4:51 pm

I was using darkcomet, and some other rats for a while, and they were working perfectly before. Now, nothing is showing up, even if I run it my self. I'm using NO-IP duc and I have the ports forwarded, I checked with canyouseeme. It still doesn't show up if I make the ip 127.0.0.1 and run it on my computer. Thanks for any help

lawlessguy - July 20, 2016, 6:05 pm

Dont use Darkcomet or NO-IP for many reasons

? Quick ? - July 20, 2016, 6:16 pm

Darkcomet is so old, there are many better options.

DePeep - July 20, 2016, 7:14 pm

What should I use that is not darkcomet? Any good free or paid ones?

Essence - July 20, 2016, 7:24 pm

The fact that you are trying to rat with no-ip and darkcomet just means you haven't done any research about the topic. Before even getting into ratting you should probably take some time to research.

Unkind_ - July 20, 2016, 7:28 pm

Darkcomet is really old; outdated and has been proven to be compromisable. No-IP also keeps records and is also not to be used if you're doing anything to someone you wouldn't want the cops knowing about.

Tbh, you can try learning something besides RATs or you can just continue on the road you are on and get something like the Babylon RAT.

Hope I helped; Wild_Card ?

johnthontaylor - July 20, 2016, 7:28 pm

what the fuck you using DC for?

DePeep - July 20, 2016, 7:38 pm

I tried Babylon rat, still the same thing happening, even if I rat my vm, or anyone else.

Any good places to research rats?

punkzie - July 20, 2016, 8:39 pm

njRAT is pretty good, I have used it myself. A legitimate link is located here (add the http at the very beginning) :<http://hackforums.net/showthread.php?tid=3924408&highlight=njRAT>

A problem may also lie in your own software or antivirus. Even if your AV is disconnected, it may still be running an active firewall. Make sure that is off. I know that was my frustrating problem back then. Good luck, my friend!
