Thread: [\[GUIDE\] NjRat complete Free Setup \[VPN+DNS included\]](#)

Klima - July 21, 2016, 9:00 am

Hello HF fellows,

This is a complete Setup Guide of one of the most stable free rats.
NjRat is coded by njq8 in VB.NET and requires the .NET Framework 2.0 dependency.

This guide and this Rat is used for educational purposes only.
Whenever You use a Rat, turn off your firewall or your anti-virus

Step 1: Start by downloading NjRat from a legit source right below
[Download](#)

Step 2: Open Njrat and select a fresh port, if you have another Rat, don't use the same port
Spoiler [\(Click to View\)](#)

Step 3: Now, you need to portforward this port you just choose. You have 2 options:
1- If you're not using a VPN (not recommended), you need to portforward into your router by using your local Ip on a browser.

2- If you're using a VPN, You need to portforward directly into the VPN, the way to portforward is different for every VPN.

For the porforward of the free VPN DarkFedora and the free DNS FagDns: CLICK [\[HERE\]](#)

To see if you porforwarded correctly, close the rat using the port, go on canyouseeme.org , It should says Closed.

Now open Njrat and enter the port (make sure it's listening), refresh canyouseeme.org and If it says Open. Congratulations, you porforwarded correctly ?

Step 3: Once NjRat is opened, Click on Builder (next to Settings and Logs) and enter your dns domain in the host part.
Spoiler [\(Click to View\)](#)

Step 4: Once you configured and checked all the options you want, click on Build.
Spoiler [\(Click to View\)](#)

Done, Enjoy your server ?

For the crypting step, I'll let you guys use the search option of this forum and choose your favorite crypter compatible with NjRat ?

For any question or problem, feel free to pm me ? I'm free most of the time

I repeat, this guide is for educational purposes only. I'm not involved in your actions ?

Have a good, Hope this Guide helps HF community ?

berta080915 - July 21, 2016, 9:34 am

whenever i check on canyouseeme it says "Reason: No route to host"

Klima - July 21, 2016, 9:38 am

Did you portforwarded in your router or you used a vpn ? pm me

berta080915 - July 21, 2016, 9:53 am

i portforwarded to darkfedora

Klima - July 21, 2016, 9:55 am

(Jul 21, 2016 09:53 AM)berta080915 Wrote: [\[CITE\]](#) i portforwarded to darkfedora

I sent you a pm regarding your problem ?

berta080915 - July 21, 2016, 10:26 am

thanks for ur help :) really appreciate it !!

Thanks Sir ?

UrLocalNewbie - August 9, 2016, 8:15 pm

i have a small issue, everything i enter the host i made from my no-ip, i enter the port (which i port forwarded) and all the details like in the picture, and when i click build and save the .exe it displays that its done, however screen's still completely empty

How to solve this ?

b1nary21 - November 25, 2018, 7:12 pm

hey man

can you help me to setup quasar rat? I'm novice

1. I bough ra4w vpn

2. Idk the next step

I can make a donation for your service and time

Please talk with me in skype : fahrufobia

Waiting you
