Thread: [need help bypassing cagefs cloudlinux \(config files, not etc/passwd\)](#)

selfhate - July 22, 2016, 2:15 am

title.
i could get etc passwd and named.conf with ln -s and viewing from cpanel (downloading it)
it doesn't work with users too.
eg: ln -s /home/user/public_html/file.php file.txt - can't download it or view it from cpanel, the mail method doesn't work

selfhate - July 25, 2016, 12:54 am

anyone knows a method ? i really need help

D4RKN0 - August 13, 2016, 8:48 am

Me too i have the same prob :p

selfhate - September 10, 2016, 5:27 am

come on ...
no one knows how to do it ?

Mysticalcx - September 10, 2016, 11:42 am

Op what exactly are you trying to do? Let me know may be able to help.

selfhate - September 16, 2016, 11:09 pm

i told you already what i'm trying to do :
eg: ln -s /home/user/public_html/file.php file.txt - can't download it or view it from cpanel, the mail method doesn't work

i try to symlink users files but i can't view them with htaccess or download from cpanel or viewing via webmail
/etc/passwd and named.conf worked with cpanel

OverUnder - September 18, 2016, 6:48 pm

I don't know cagefs, been out of stuff for a bit. It's like a jail? So escalating won't make a difference? I'd check the version(s) of what's running and if they aren't current, see if anything has been patched recently.

selfhate - September 25, 2016, 4:18 am

yes, it's jail :) there are some bypasses but it's configured better

slayconsole - March 31, 2017, 4:33 am

me too i have the same problem if u bypassed them please tell me
thank you
