Thread: [PokeFast | Latest, Best, & FASTEST Compiled Bot!](#)

funtela - July 23, 2016, 10:51 pm

2.0 Released!

<https://hackforums.net/showthread.php?tid=5352085>

PokeFast

I did not make this bot. I'm simply sharing it with you guys ?

Just released and it is SO easy to use and has amazing features! I'm already making 3x XP more than the other bots! ?

- autorecycle items
- walking speed
- evolve option
- transfer duplicates
- choose Pokemon to not catch
- minimum CP to catch
- and more!

Make sure to read the "README FIRST OR FAIL!" file for instructions before starting it up!

Of course it recycles potions. Why the hell would you want potions if you're botting? And yes it recycles Pokeballs but you're never out of Pokeballs. It'll always keep enough to catch Pokemon.

You never stated in the thread you didn't make the bot. Is what they're aiming at. Like on my nest thread I stated I didn't make the list.

If some random noob just came along they would automatically think you made the bot since of the presentation of the thread.

(Jul 24, 2016 12:53 AM)illinifan Wrote: [\[CITE\]](#) Can you log the account out on the bot, and log into the account on a phone to check its progress?

You have to fully disable location features. If you don't do that, you'll be soft banned.

Think of it this way.

Phone sets GPS coords.

Bot sets GPS coords.

Both are constantly doing that, so you'd be jumping far distances instantly. Even spoofing your location to the bot's default location is risky. The bot could be miles away from the original location.

Either you're soft banned or you've done something with your settings that messed something up. The bot is set to throw "excellent" throw each time so it's very rare to have one flee.

Maybe you had too many. It automatically recycles a certain amount of pokeballs as well so you NEVER run out of space. I guess it recycles some ultra balls as well but I've seen it use one when it's needed.

Go to your app settings if you're using Android and press "Clear data".

Not sure how you would do this on an iPhone but yeah.

Yea. At least for me it's easy. The app manages to load all the way up to the point where I can click on the settings icon before the "No GPS" error comes on.

Just a few things to let you know, not tryna thread trash it just you might be able to let coder know.

- This bot crashes where as other one doesn't
- Its no faster ran both in same location

So atm I would use teh necro bot

I haven't had any crashing issues. What I mean by faster is that you can increase your walking speed making you level up twice or three times as fast. Or even faster. It's also compiled so it just makes it easier to use.

I get the feeling you're trying to compete with my thread lol. I don't care. I'm just showing people a new bot I found which (in my opinion) is best at the moment and teaching them how to use it. There's nothing wrong with that.

Yea but you gotta activate them manually before you start up the bot :). I use Nox and just spoof my location to where I'm botting and I'm able to do it while the bot is still running.

It automatically recycles them. It's implemented in. There's not wait to edit that for now. Maybe with the next update we'll be able to.

Somewhere between 10km/h-6km/h. It would be cool that the bot would use random speed, like, a human.

Anyway, I'm going to leave it open for 1 hour or two on a brand new account and see how's going.

That's not the issue i have the same problem it collects more pokestops than pokemons if i go back to "Pokecolor" it will continue catching pokemons none stop on the same location im using on this one.. Hope they get it fixed.

I am also having the same issue. I was running 4 on my PC overnight. 2 of them ran out of pokeballs and were for some reason not getting anything from stops, restarted the bot and it worked fine. My other 2 randomly closed. Was hoping to run some accounts while I am on vacation, might have to switch bots.

BTB™ - July 25, 2016, 11:06 am

Pls clear these doubts -

1. We need to put in our trainer id n pwd here. right?

```
<setting name="PtcUsername" serializeAs="String">
<value>username</value>
</setting>
```

```
<setting name="PtcPassword" serializeAs="String">
<value>password</value>
</setting>
```

2. Do we need to put anything here? Actually I am going to GPF spoof it. (Game not available here)
In case we need to put in something, what should be the best value for latitude and longitude?

```
<setting name="DefaultLatitude" serializeAs="String">
<value>0</value>
</setting>
<setting name="DefaultLongitude" serializeAs="String">
<value>0</value>
</setting>
```

3. What does this statement exactly mean?

"You want to look for pokestops around 100+ to bot properly.

After it refreshes with current highest pokemon and it says 0 pokestops that means you are softbanned and to wait 30sec-1min. (to prevent this find higher dence spots)"

If you read the letters you would have noticed you did spell some pokemons name wrong or without a capital letter.

You are not yet able to use lucky eggs with pokefast. At some point this may become an option but like egg hatching, you would need to sign into the account, use the egg then restart the bot.

<https://github.com/NecronomiconCoding/NecroBot>

I don't use it, but the logic is in there to use lucky eggs prior to evolving pokemon. At the very least, it means the requests are there for others to update their bots.

I think you have got a soft ban from pokestops. Just wait for a couple of mins and it should be sorted out by it's self. (about 20 min)
