Thread: [How to jailbreak iOS 9.3.2-9.3.3 \[iPhone, iPod, & iPad\]](#)

Deadly007 - July 24, 2016, 4:42 am

The day has finally come, today a few hours ago the pangu team tweeted they would have a working jailbreaking tool for iOS 9.3.2-9.3.3 but moments after many users found the tool in fact was already uploaded to their website but in Chinese, here's the tutorial on how to get successfully jailbreak your iOS Device:

64-Bit devices only. This means devices from 5s to the latest for iPhones.

Update: Does not work for iPad Pro 9.7, and the iPod Touch 6.

Before you try this, I'd advise you to back up your iOS Device in case you have any problems.

This is a tethered jailbreak, which means you need to re-jailbreak after you reboot. But hey, better than nothing.

Windows Tutorial:

1. Go to http://jailbreak.25pp.com/ppjailbreak/?from=25pp_00119 (Remove Spaces)
2. Install the PP jailbreak tool
3. Click on the green button to start the process
4. It will now ask you to accept a developer profile on your device (Settings > General Profiles)
5. The tool will now install PP on your device
- 6 Open the PP tool on your device and accept push notifications
7. Click on the circle
8. Now lock the screen, after locking it will inject the jailbreak
9. You will now get a push notification and PP will install Cydia

Mac OS X (No VM!) Tutorial:

1. Make sure you got the latest Xcode installed.
2. Download the jailbreak ipa http://download.25pp.com/ipa/jailbreak/inv_ent_final_0155.ipa (Make sure its around 20Mb as the download often fails midway)
3. Download iOS App Signer from [here](#)
4. Create a new app in Xcode.
5. Select your device as a target
6. Do all the steps required to create a provisioning profile (There should be an error in Xcode which says "Fix-It")
7. Run the app once on your device to verify it's working, you can close it afterwards. (And trust the profile you just created)
8. Open iOS App Signer and choose the ipa you downloaded, choose the provisioning profile that you just created (check the app identifier)

9. Start the resigning
10. Open Xcode - Window - Device
11. Install the ipa you just signed.

Edit: When you get the notification, wait around 1-2 minutes. The notification means that Cydia is being installed. Don't do anything while it happens, and after its done, it will reboot automatically.

Please don't uninstall the PP Tool. You're going to need that for each time you reboot your iDevice.

You'll need a computer first in order to download PP on your app. However, you don't need a computer to re-jailbreak after a reboot. Just open the PP App and itll do it for you.

Like always, if jailbreak fails the first time, reboot and try again. Pangu addressed this problem in their FAQ.

FAQ:

1. What's a tethered jailbreak? What's the difference?

Now each time you reboot your iDevice, you need to re-jailbreak. You don't have to connect your device to your computer, but you still have to open the PP App for a re-jailbreak. The only difference of it from an untethered jailbreak is that tethered jailbreak require a re-jailbreak after a reboot while the untethered doesn't.

2. Do I have to re-jailbreak after a respring?
No.

3. Do the tweaks stay after the reboot? Or would I have to reinstall all tweaks?
All the tweaks will stay and the device will be back as if it was jailbroken the whole time once you re-jailbreak through the app after a reboot.

4. Why is it asking for an Apple ID?
Apparently some people are getting this message - its another common sideloading feature, so go ahead and give them your apple ID. The app is being installed under your apple ID, so you should give your legit apple ID.

5. Cydia crashes after jailbreaking. What to do?
Open the PP Tool and retry the download. It should work after another try. The device should automatically reboot sometime later after you lock your screen

6. I've been stuck on the windows pp tool for an hour. Is this normal?
If this is the case for you, I'd advise you to restart the whole jailbreaking process from step 1.

MrARM - July 24, 2016, 11:49 am

It works!

Just a quick thing, it isn't a re-jailbreak. its called re-tethering.

sxcurity - July 24, 2016, 12:06 pm

Glad to see an early tutorial of this. Is there a Mac option?

Deadly007 - July 24, 2016, 2:48 pm

Is there a reason why i can't log in with my appleid?

Deadly007 - July 24, 2016, 5:16 pm

(Jul 24, 2016 03:50 PM)Molyx Wrote: [\[CITE\]](#) Is there a reason why i can't log in with my appleid? End pphelper5.exe in task manager, after unplug and plug your phone to the computer. Once you've done that, try logging in with a new Apple ID.

Mino - July 24, 2016, 5:19 pm

This has already been posted but thanks none the. Less for the share

EK9# - July 24, 2016, 5:27 pm

help please what does this mean ?

Where else has this been posted? From what I know I posted his thread the moment the jailbreak came out which was around 5 AM (MT).

Oh nevermind you posted it before others

Exemplification - July 24, 2016, 7:10 pm

Going to have to resign the thing every 7 days -_-

That'll be annoying.

Deadly007 - July 24, 2016, 7:19 pm

(Jul 24, 2016 05:27 PM)EK9# Wrote: [\[CITE\]](#) help please what does this mean ?

I'm not sure, try closing and opening the program. If that still doesn't work for you, try downloading the jailbreak app from here: <https://totoateam.com/pangujb/> (No computer required!) This is the same app you install from the client in your computer btw so after its done downloading just follow the steps in the OP.

That'll be annoying.

Yes, but hopefully the Pangu team will release an untethered version.

gmanthedMan - July 25, 2016, 2:35 am

this is amazing, been waiting almost forever.

Tethered or not, still a jailbreak

Fliiix - July 25, 2016, 10:53 am

I'm keep getting this message when I try to jailbreak my Iphone 6S

Does anyone know what the fuck that means?

Edit: I got it working after a few more attempts.

did you lock your phone yet?

nique ta mere - July 25, 2016, 5:58 pm

(Jul 25, 2016 05:53 PM)gmanthedMan Wrote: [\[CITE\]](#) did you lock your phone yet?
it's locked atm yeah i have unlocked it a few times while it was doing it though could that be an issue?

Deadly007 - July 25, 2016, 6:11 pm

(Jul 25, 2016 05:58 PM)Abel Wrote: [\[CITE\]](#) it's locked atm yeah i have unlocked it a few times while it was doing it though could that be an issue?

Close the program and restart from Step 1.

gmanthedMan - July 26, 2016, 11:05 am

(Jul 25, 2016 05:58 PM)Abel Wrote: [\[CITE\]](#) it's locked atm yeah i have unlocked it a few times while it was doing it though could that be an issue?

most likely, i believe you are supposed to leave it locked till it pops up a notification or reboots the device

iNk. - July 27, 2016, 2:30 pm

Don't know if anyone could help but I attempted the online version on my iPhone 6 (donated \$10 to Pangu I have no issue supporting them) but I keep getting this error.

<https://i.imgur.com/uETQphp.jpg>

If anyone has ran into this error and fixed it I would love to know

Sick - July 27, 2016, 3:11 pm

Brilliant thanks op posting here as i will do this 2 more been waiting ages for this

Thank you very much

Lana Del Rey_ - July 27, 2016, 3:18 pm

I want to jailbreak my phone, but is it worth it for a semi-tethered jailbreak? Is it guaranteed to stay on my phone?

iNk. - July 27, 2016, 3:25 pm

(Jul 27, 2016 03:18 PM)Lana Del Rey? Wrote: [\[CITE\]](#) I want to jailbreak my phone, but is it worth it for a semi-tethered jailbreak? Is it guaranteed to stay on my phone?

Honestly I've been jail breaking for so long and this one is just a pain in the ass.

I would hold off until they release the English untethered

Lana Del Rey_ - July 27, 2016, 3:27 pm

Exactly how I'm feeling. Been waiting a long time for this, but it doesn't seem 100% yet.

Deadly007 - July 29, 2016, 10:22 am

Pangu have released the English version of the jailbreak, to download go to en.pangu.io and follow the instructions on there, you'll need to download Cydia Impactor by Saurik to sign the IPA file to your device.
