Thread: [Visual Protector 0.2 | Scantime+Runtime | crypter example source code in VB.Net](#)

VisualSoft - July 24, 2016, 12:57 pm

I have been receiving many request to share my crypter source, So finally I am here with one of my old Version of my Crypter. Its very simple and not that advance compared to current version as I have made it when I started learning about Crypters.

Features:Managed resources storage method (CodeDom)
Simple Xor encryption
RunPE Injection
Add file to startup
Change the stub's icon & Assembly Info using CodeDom
Commented in the most critical parts

Screenshot:

Credits:

Aeonhack (RunPE)

Delirium™ (Thread Layout)

Various other people for various reasons.

Download: [Example Crypter](#)

Password:FreeRelease

(No virus scan, this is source code...like seriously...)

Addendum:

This source code was written for educational purposes. Do not expect it to be FUD. I am not including any password for the file, no PPD, no begs for replies or PMs. This section is a school, not a kiosk where you can bargain for these.

your welcome,

Just wanted to help out the community. ?

ForceJew - July 28, 2016, 10:55 am

Thanks dude really nice

Even tho i code in c# but its almost the same:)

xMrTechnox - July 28, 2016, 4:32 pm

Nice release, although I'm getting a certain error once I crypt & I don't know how to make my own Crypter Stub. Tho thank you in advanced

javdu10 - July 29, 2016, 2:14 pm

Thank you very much OP , it will help a lot to learn how Crypters works, its still 12/35 by the way, WOW :D

Keep it up man your free version is awesome !

VisualSoft - July 30, 2016, 12:31 am

(Jul 29, 2016 02:14 PM)javdu10 Wrote: ([CITE](#)) Thank you very much OP , it will help a lot to learn how Crypters works, its still 12/35 by the way, WOW :D

Keep it up man your free version is awesome !Try to FUD the dll and it will lower down the detection's.

javdu10 - July 30, 2016, 2:38 am

(Jul 30, 2016 12:31 AM)VisualSoft Wrote: ([CITE](#)) Try to FUD the dll and it will lower down the detection's.

LIKE REALLY WTF AHAHAHHH I MADE IT TO 4/35 AHAHAHAHAHAHAHAHAHA

omg i just cant believe it i acted as the most pure skid ever, do antivirus are like

pay 110\$ a year and get protected against suspicious variable names like "gethacked" or "myvirus"

it's really amazing wow, thank you for this amazing tip <3

Edit : I figured out that 3 of them were due to the icon xDDD the only one who detect it : IKARUS Security - Trojan.MSIL.Injector

Edit2 : the change icon fonction is not working for me , as i'm not good enough to fix it now it will take some time x), i cant wait to make it 1/35 :D

treypeter1 - July 30, 2016, 2:46 am

does it work.? or it's just like another crypter

javdu10 - July 30, 2016, 2:49 am

(Jul 30, 2016 02:46 AM)treypeter1 Wrote: [\[CITE\]](#) does it work.? or it's just like another crypter

Of course it work.. i tested with luminosity link if you want to know

well a last bump for me : i just removed the icon you add by default and i got a 1/35

pscan.xyz/results.php?id=WFZIWtpkmtNhRmVK , it's just insane !

same encryption same options , and now 5/35 , pscan.xyz/results.php?id=VpioHHlevmjyDjhR

It's seems that Avs are coming on Hackforum xD

VisualSoft - July 30, 2016, 11:57 am

@javdu10 happy to see you got it near to FUD

Have released the source only to help our users like you.

javdu10 - July 31, 2016, 1:37 am

Wow thanks :D

I have one question , The CL1 to make the DPL is the clean version of aeonhack RunPe or did you change it a bit? because i got a problem, I generate DLLs etc and after the crypt

when I start the program it tell me that "the reference of an object is not defined at a instance of an object", and I have no errors in the code.. I'm sure it's something so simple

that I cant notice it, I can bet with reading this error code you know were is the error :P

thank you in advance

VisualSoft - August 3, 2016, 1:21 am

SIM-1230922 - August 18, 2016, 4:46 am

I'd just like to clarify that I'm in no way shape or form any expert on this but why
does, for example, the "startup" get declared but never used?
It's evidently set to either vbc, itself or regasm but I fail to see where this has any use?
Care to explain to me?

VisualSoft - August 18, 2016, 2:53 pm

its an old version so some features were not working at that time,
by default it has self-injection, other injection do not work.

DI?E - August 18, 2016, 3:24 pm

This is what it should look like in its current state as only two features that work:

Although the assembly can be altered via the code as the assembly does not generate anything but Posion API. assembly info. The icon also only works if you rename the icon to Icon.ico and have it within the folder of the executable. You can fix this by doing this:

It also doesn't use any sort of encryption even though there are snippets in there for XOR. Regardless good start to get some people on the right track to learn about them.

brav3h3art1 - August 24, 2016, 4:18 am

nice release, i will check the code and then i will able to comment.
thanx any way

Alpha_Coder - August 24, 2016, 11:52 am

Good Job Bro Very Nice Tool

You are correct,

I actually tried to add new features for v0.3 on the same builder of v0.2
so as a reason v0.2 output did not had all this option.

?????? - September 2, 2016, 2:03 am

Why does Ikarus detect the stub as Jigsaw Randomware.

I couldn't find anything in the stub, or crypter itself, but I didn't do extensive looking.

I got my file to 3/35, Ikarus is one, and the other two are MSIL, and go away when I change the icon or but they get replaced by others.

The Ikarus one is the only one I can't get rid of.

Am I just having bad luck with the JigSaw detection.

Someone posted that it has XOR snippets, that don't do anything, so I removed the XOR Encrypt sub, couldn't find a XOR decrypt sub anywhere, but still detected by JigSaw

Edit: Got rid of the JigSaw detection, it became a MSIL Injector, which I believe is an Icon/Assembly detection, as the other 2 MSIL Injector detections dissapear, and appear as something else on a different AV when I change the icon

\$lick - September 2, 2016, 9:33 am

Regasm sounds very sexual.

ForceJew - September 3, 2016, 8:30 am

You can work more on it and I am sure you will Get it FUD.

indicud - September 10, 2016, 11:26 pm

When I crypt my file and run it it says the file has stopped working and closes out :/

PussyDone - September 11, 2016, 9:30 am

Thanks for the share Bro.
i check now

VisualSoft - September 15, 2016, 1:09 pm

(Sep 10, 2016 11:26 PM)indicud Wrote: [\[CITE\]](#) When I crypt my file and run it it says the file has stopped working and closes out :/

It looks to be an issue from injection, as you might be trying to inject native file into managed app.

laleendz - September 16, 2016, 2:23 pm

Open Visual studo - > Open Project -> Browse to the source folder and open it.

But i would suggest you to go with something Easy as Crypter is the hardest thing for a new user.

branb - January 6, 2017, 10:48 pm

this might sound dumb but how do i open it?

JamesMysteryBond007 - January 7, 2017, 10:13 am

branb If you don't know how to open it then this is definetly not for you. Don't rush coding skills. Start with the basics or you will just get confused. People here will flame you for doing that so be warned xD

You need Visual Basic and Youtube. It's that easy.

Btw, VisualSoft very nice crypter. I wish I had more of these kind of posts when I started learning crypters. I remember lurking dozens of crypters just to find all the functions nowadays crypter sources' have all included. Very nice community work

Small Tip: For those trying to refud this go for the runpe. It will be detected at runtime, I can guarantee it. This RunPE is so fucking saturated that it's just a simple antivirus hit. I've heard Aeonhack's name since atleast 2 years ago. Also every c+p crypter sold used it.

k0spwn - January 8, 2017, 1:33 pm

Thanks a lot for this VisualSoft ! It's awesome to share a source like !

I played with the code a bit and added a working binder but the thing that I still can't manage to do is reFUD...

I'm new to VB.net and VisualStudio (I used Eclipse before) and I've never touched any crypters before so if someone could guide me for reFUDing this I'd be really thankful !

VisualSoft - January 8, 2017, 1:39 pm

(Jan 8, 2017 02:39 PM)VisualSoft Wrote: [\[CITE\]](#) you can search on youtube and find some good video tutorials,

thats the place where i learned from.

yeh it shows in your programming skills you follow youtube. Ever heard of strict for One thing?

Your source is nothing but random copy and pasted code. Since you constantly use different methods etc.

take this sack of shit for example

```
Private fileBytes As Byte() = Nothing
Private keyBytes As Byte() = Nothing
Private resources_Path As String = Application.StartupPath & "\2016.resources"
Private library_Name As String = Random(8)
```

```
Dim bind_Chk, injection, startup, start_name, ZoneID, Delay, Persistance, protect_process As String
```

dim takes the default modifier instance. IN THIS CASE PRIVATE.

please explain in full why you used private, then dim at the same level, then some single lined and others the same line.

please explain this to the forum since you are at the level to code said project.

```
Private resources_Path As String = Application.StartupPath & "\2016.resources"
```

you never even heard of Path.Combine Method???? you are nothing but a new programmer wanting to pretend you can code at such a level.

pathetic excuse pretending you know 5% of whats in your code. Its sad mate

D9ni3l - January 9, 2017, 3:02 pm

thanks you for the share! very useful for learn.

k0spwn - January 10, 2017, 12:12 pm

Hey, back again, checked on youtube and only found videos on how to create a crypter and no refud tuts...

Could you enlight me with you knowledge please ? I'd really to learn this type of things and I'm still starting....

You're going to have to take initiative and investigate how AV detect viruses and go from there. I promise it's not as complicated as it seems once you keep researching.
