Thread: [Odd batch-file in System32-folder](#)

domien - July 25, 2016, 8:59 am

I was looking into my System32 folder and I found a batch-file (.bat) named {A6D608F0-0BDE-491A-97AE-5C4B05D86E01}.bat

The file was last edited 20July.

It contains this code:

Code @echo off

if exist igfxEM.exe start igfxEM.exe

if exist igfxHK.exe start igfxHK.exe

if exist igfxTray.exe start igfxTray.exe

del /Q {A6D608F0-0BDE-491A-97AE-5C4B05D86E01}.bat

Does this belong to Windows? I have windows 8 but I made the free upgrade to Windows 10, ie. I have Windows 10 now running. My system is 64-bit.

Are you using an Intel computer?

By Intel computer I understand you mean my processor is from Intel, then yes.

Intel® Core™ i7-4510U CPY @ 2.00GHz 2.60GHz

Ok perfect. This is not a virus or anything to be worried about. This is related to Intel Graphics as are all the commands, I believe that is an update run. Nothing sinister or malicious.

Thank you, sir.
