Thread: [PokeFast 2.0 | Latest, Best, & FASTEST Compiled Bot!](#)

funtela - July 26, 2016, 5:30 am

PokeFastV2

I did not make this bot. I'm simply sharing it with you guys ?

Just released and it is SO easy to use and has amazing features! I'm already making 3x XP more than the other bots! ?

- autorecycle items
- auto use Lucky Eggs
- walking speed
- evolve option
- transfer duplicates
- choose Pokemon to not catch
- minimum CP to catch
- and more!

Raz Riverblade - July 26, 2016, 5:35 am

"-and more!"

any chance there's an auto incubate function in there somewhere?

Na I wish haha. Maybe in the next update. I'm just happy they added the lucky eggs feature. I've been waiting for that like crazy.

?Starfire? - July 26, 2016, 5:38 am

What's different between this version and the last? I'm just debating whether or not i'm going to update.

Anti Softban mechanics when running at high speeds, auto lucky egg use, and fixed a lot of crashing issues from the previous version :)

1MPERATOR - July 26, 2016, 5:48 am

At what speed should I run this bot?
Like 50KM, or can I also do 200KM?

funtela - July 26, 2016, 5:51 am

With this version you can safely do 200KM. In the config file the default is actually 300KM lmao. But at those speeds I don't think you can get your eggs to hatch.

can you explain what things are affecting each other and what they exactly mean? I can read what it says but not how they cooperate with each other. :P

And when does it use a lucky egg? I only want it to use a lucky egg if I can evolve more than X pokemons. Is that possible?

how in the world am i getting 180.000 xp/h?

Tatux - July 26, 2016, 6:10 am

Im changing the 300kmh to 16kmh but when i launched it, it stil went 70kmh.

Anyone else have this? fix?

edit:

now it slows down properly but that was weird a few mins ago. I dont need my bot running at 70kmh....

<https://gyazo.com/49d2b256e544f109f026c5144bdb6e8c>

well speed is distance/time
and time is relative

so it can basically go as fast as it wants as long as you interpret it as going 12 km/h

It's the way the bot works. It's called Poke"Fast" lol. I'm not sure it could be a bug but it'll run fine at that speed. No ban issues whatsoever so no worries about that.

Not really, if Tatux says it goes 100km/h then it pretty much goes 100km/h, not 12km/h like he wanted, what are you trying to say?

Just change it to 20km/h i think it is the minium.

Thanks for this. Pre compiled bots are very useful as some people don't have access to visual studio, like me. My trial ran out a few days ago. Poke fast is good, I just wish there was customization for the item recycling.

It prioritises IVs over CP, you can change it in the config. But IVs are more important than CP especially because you will farm a lot of stardust and candies when the bot is running and then you can just power up your high IV pokémon.

Then once the program starts again it says its walking, and i qoute, "155230.63292611m away, walking to location." and it will take 2235.32 seconds!?

How can i fix this? its very werid/

EDIT: My \bin\Debug\Configs\LastCoords.ini had some weird stuff in it. I deleted it and it worked fine again. Apologies.

Same here when i find rare pokemon when i changed coords. why it takes me to 78003 seconds?? explain me how i fix this

It seems as if you need to be in a more populated area with more poke stops so you do not have to move that far away to get to a stop.

Far better if you have the right settings and locations you can make 60k xp per hour.

reiic - July 27, 2016, 12:14 am

I'm trying to set up the bot to only keep Pokemon that are +95% IV and transfer everything else, how do I do that? Can't seem to find a way to only keep high certain things

Necro updates his bot more often than spegeli. Spegeli (PokeFast) just takes necro's updates [pretty sure] and merges it into his with his own custom settings. I personally recommend Necro's bot and just make the walking speed 250 km/h which is the default for PokeFast.

6 out of my 7 bots are working fine.

I have one in particular that's running REALLY slow and keeps crashing with some yellow text.

In short, the % of how good the Pokemon is.

Anything 95+ is good.

Also I'm with everyone else, why isn't it transferring..?

What to do?

I realised I fucked up. Go to Config file and then you have 2 files;
NotToTransfer and PokemonsToEvolve

Clear the entire list of 'NotToTransfer' and save it.

The PokemonsToEvolve, just copy and paste an entire list of the Pokemon so it evolves everyone, more XP gains p/ hour. :)

Basically stops you from jumping so far so fast because that would result in a softban

I think that part is bugged. The v2.0 is just a beta right now so it should be fixed pretty soon. I'm just using it right now to power level. I'm not really focusing on Pokemon.

Change these settings:

```
<setting name="NotTransferPokemonsThatCanEvolve" serializeAs="String">
  <value>False</value>
```

Keep it on "False"

That'll help from keeping your bags full.

IV is what determines if your pokemon is strong or not from my understanding. I have mine set to what you see below. The CP may not seem high for some of them but they will be better than the others you have if you power them up.

```
Code <setting name="KeepMinIVPercentage" serializeAs="String">

As I already have the auth token active, I believe that's why.
