Squealed - July 26, 2016, 12:36 pm

qwerty is one of the most used

Mine is "incorrect"

So whenever I type in the wrong password, it says: "Your password is incorrect"

I'll give you the general layout of mine.

letter, letter, letter, letter, number, letter, number, letter, letter, CAPITAL LETTER, number, symbol,
number, number, number, letter, letter, letter, letter.

I remove the last few letters when it's too long to work on a site.

Example of password using my pw scheme:

hain4k0daN3\$109frog

This is why I laugh my ass off when someone tries to bruteforce my shit. By the way, I obviously altered a few letter/numbers/placement of symbol/capital letter so nobody can create an algorithm to crack my pw ?

Common Passwords:

querty

abc123
123456
password
password1 (or another number)
user's birthday
variant of user's name
pet names
girlfriend / boyfriend names

Soulmate~?? - July 26, 2016, 12:39 pm

password
123456
qwerty

Are the most common

Wow this is probably one of the most unintelligent ways to remember your password, but it's so fucking convenient that I really want to change one of my accounts' passwords to incorrect now.
Yes, I know you're joking.

Qwerty is commonly used in a bunch of passwords, qwerty, qwerty123, qwertyuiop, etc.

I've been using the password SupaDuperDaAwesomeDude81 since I was 8 playing Neopets. Hasn't failed me yet, and it's pretty tough to guess.

Who would guess such a password? ?

Pretty sure: password123

Is the most common password.
