Thread: [Hack Vulnerable Website with IIS Exploit \[HOT\]](#)

Root.Noldentity - July 26, 2016, 3:36 pm

? With IIS Exploit we can upload the Defaced page on the Vulnerable Server without any Login. It is most Easiest way to Hack any site.

? STEP 1: Click on Start button and open " RUN" .

? STEP 2: Now Type this in RUN

```
%WINDIR%EXPLORER.EXE ,:: {20D04FE0-3AEA-1069-A2D8-08002B30309D}::  
{BDEADF00-C265-1 1d0-BCED-00A0C90AB50F}
```

? Now A Folder named "Web Folders" will open.

? STEP 3: Now " Right-Click" in the folder and Goto "New" and then " Web Folder ".

? STEP 4: Now type the name of the Vulnerable site in this. e.g." victimsite .com/" and click "Next" .

? STEP 5: Now Click on "Finish"

? STEP 6: Now the folder will appear. You can open it and put any deface page or anything.

? STEP 7: I put text file in that folder. Named "securityalert.txt" (you can put a shell or HTML file also). If the file appear in the folder then the Hack is successful but if it don't then the site is not Vulnerable.

? Now to view the uploaded site i will go to " victimsite .com/securityalert.txt" In your case it will be "[sitename].com/ [file name that you uploaded]"

. NOW TRY THIS FROM YOURSELF ND CMNT HERE ?[/align]

antmatt - July 26, 2016, 4:32 pm

about to try this. you got me hyped up mad

not working on windows 7, do I need 10? Im in a vm on linux rn

Wizmo - July 27, 2016, 12:24 pm

That's very old method dude. That was working before a decade.

Wireless Network - July 27, 2016, 2:33 pm

You've just copy pasted old method without even trying?

moorbes - July 27, 2016, 2:35 pm

lmao, tbt year 2004-2005.

antmatt - July 27, 2016, 3:47 pm

wow this is what I get for quitting windows a long time ago. I used to be on top of the windows game

and now I only run linux. This is what I get ?

TSJ1980 - *July 27, 2016, 4:12 pm*

Lemme just hop in my time machine and give this a try in 2005 :)

Plethora - *July 27, 2016, 4:14 pm*

Thanks fam Imma go hack a 80's retro music festival site!
