Thread: [Binded file opening at startup](#)

newway - July 27, 2016, 1:02 pm

I own kazy crypter, and I am stuck at this stage

Whenever I bind my file with stub , my bind file is also opening at startup, how do I stop my binded file to open at startup, I have choose run at once, which work, but binded file is not opening when client opening it 2nd time

Help me, I am stuck at this

You can check run binded file once feature if that crypter has.

Hi there ?,

I have a solution for you if you use a RAT, ?

Use the "On Connect" feature by adding a server update command that update the server (or Down&Exec) with a non-binded crypted server you uploaded somewhere or uploading it from your computer.?

For getting it works perfectly, the file binded you built for first opening needs to don't have a startup option. ?

You can do it manually, by having custom identity on your RAT (Non-update and Updated) for each of your servers, and updating manually, it'll change the identity at updating and you can know who is up-to-date with your non-binded server. ?

Peace&3XPLOITS ?
