Thread: [PokeSniper 2.1.11 - Pokemon Sniper - Catch Any Pokemon No Matter Where You Are](#)

funtela - July 28, 2016, 9:52 am

PokeSniperV2.1.11

I did not make this bot. I'm simply sharing it with you guys ?

Creator of the bot is Maclone

UPDATED 08/14

PokeSniper2 is a tool to allow you to catch any Pokemon in any location from any location (your current location) without getting softbanned.

Run PokeSniper2.exe

PokeSniper2 will ask for the information it needs to snipe Pokemon.

If you use PokeSniper2 frequently, edit the included user.xml to quickly load your info.

Supports continuous usage. Automatic ball and berry selection for the best catch chance.

If your Google login is not working, it could be that Google requires a captcha to be solved, which is currently not implemented in RocketAPI.

Do not use the Google refresh token.

Where to find Pokemon to snipe?

The coordinates were probably wrong. You'll get soft banned if you put in coordinates where there isn't a Pokemon. Just use the unban bot I posted bro haha.

V?rt - July 28, 2016, 10:21 am

Where can I find my own location? I tried google maps but it's dumb.

Edit: I found my lat, long, what do I put for the altitude though. I'm confused.

Btw just done a bit of RE'ing and monitored the network activity; looks like this bot is kinda safe (I wanted to do that to make sure it was not saving Google's accounts informations). I do not vouch for it and you shouldn't quote me on that though.

I'll try to dig more in depth later.

SIM-2223238 - July 28, 2016, 11:07 am

Not sure but it got flagged as a trojan, may be a false positive.

you have to fill in your google username and the password to your google account. Which always is risky knowing not much about this bot / sniper.

PTC servers are down right now. Google is a bit unstable as well so if anyone is having issues, it's because of that.

Isn't working for me, assuming it's cause the servers or whatever is unstable currently so that kinda

sucks because I'm missing a ton of good shit.

Serious question that I need to know from you. I am not bashing you in any shape of form.

But what is the deal with you just leeching off of other communities and releasing it here?

At least give credits to the developer instead of "Hey guys I didn't make this tool but here ya go!"

Developer for this tool is Maclone correct?

But what I'm saying is what if a tool was backdoored and you released it here and you got banned from someone elses tool? (Not saying this is or anything) I can tell you spent some time on your account with HF. Just something I would be weary of.

I would love to give credit to the source. But I'm like 90% sure that posting links to other forums is against the rules. And I'm not trying to get a warning or be banned because of that. Everyone knows that any account botting is risky. I'm obviously not responsible for their accounts if they get banned.

I said backdoored. Meaning containing a rat. You posting the link would be your fault. You don't have to link the source just give credits to the developer name.

Like if you made a program and I released it on let's say "Google" I would say Credits to Ryan Reynolds for making this program.

Just a heads up. But if I was you I would only release open source github links on here and allow the members to compile it themselves and use it instead of using pre-compiled files which could contain anything.

I'll gladly add the developers name but I cannot link it. If any of these programs contain a RAT or anything like that I'm not responsible either. Everyone knows these bots are from somewhere else. If this one had a Github link I would post it, but it doesn't.

You would be held responsible. That's like me releasing a program that contained a rat. Pretty sure members wouldn't want to hear the excuse "Soz didn't know it had a rat" But yeah just start adding the authors name to the postings, least you could do haha.

But yes this pokesnipe is closed source, it got decompiled and got released to the original source but the op got banned instantly.

IV is their maximum cp potential, so if you have a 100% IV dragonite and you are level 30. If you power it up to max, it is impossible to get a dragonite with higher cp. btw if you are level 29 and you max out a 100% IV Pokemon, it's not the top, when you level up, you will be able to power it up once more.

Still works really well, not tried the auto sniper in a while though

Trex - August 2, 2016, 3:16 pm

Auto sniper doesn't work because the website autosnipers.com has a bot prevention system atm because of the DDOS problem's they've been having.

Till that is fixed you can do the following:

- 1 - Put your current coordinates into user.xml (The coordinates of your character, not the pokemon you are trying to snipe).
- 2 - Open PokeSniper2 application
- 3 - Type Y when the application asks you, "Read settings from user.xml?".
- 4 - Hit Enter to confirm settings (make sure your coordinates are correct. If not you might get softbanned).
- 5 - Open web browser and go to either <http://pokesnipers.com/> or <http://spawns.mazbron.net/?>
- 6 - Find the Pokemon you want to snipe on the webpage and copy the coordinates of it.
- 7 - Go back to PokeSniper2 and type in the name of the Pokemon you want to snipe.
- 8 - Paste the coordinates of the Pokemon you want to snipe and hit Enter.
- 9 - PokeSniper2 will attempt to snipe!

siege24 - August 2, 2016, 3:31 pm

Been working for me as of a few hours ago. Haven't had any issues with it since it rerelease. I don't use it a ton, but snipe only Dragonites and snorlax's lol.

mustangguy1215 - August 11, 2016, 7:48 am

Worked for me, caught a Blastoise but got soft banned. Gonna try again in a few hours.

Ryfass - August 11, 2016, 9:40 am

yes it's still working fine

I have a question, do you know how to use @yahoo email to use this?

always get error :

You cant log in with a yahoo.com email address. The only ways to log on to Pokemon Go is by creating a Pokemon training club account (ptc account) or by having a gmail account.

Looking4Dev - August 11, 2016, 10:09 am

For some reason PokeSniper keeps telling me "Could not load settings. user.xml either missing or malformed." but I unzipped PokeSniper after downloading, changed the user.XML file (changed login type to ptc & edited username+Pass). and it still gives me that error... How?

Crowley - August 11, 2016, 10:24 am

Does this have proxy support yet?

Shurikenger - August 11, 2016, 11:41 am

Help this worked fine yesterday but now whenever I try to snipe Pokemon it just says that the berry failed and the Pokemon got away. I can confirm that I am not soft-banned or IP-Banned in any sort of manner.

I was sniping like crazy earlier today for about two hours. Each Pokemon sniped was about 3-4 seconds after the next one. It has been about 8 hours ever since and I'm still good lol probably not a good idea but we'll see in the next couple of days!

Ok, I have another problem. I got the sniper working, caught a Chansey, Gyarados and then a Grimer. When I tap the Grimer or Chansey the game freezes up (I managed to ship the Gyarados to the Prof.). Halp!

All you guys sniping have got some balls. The bans will be more likely to come if you are sniping because of all the teleporting.

I don't think this bot teleports to snipe. Pretty sure it spoofs GPS to catch something far away, and actually makes it look like you caught it near you. Just don't catch rares from countries that aren't yours.

c0balt4 - August 17, 2016, 9:27 pm

Having played the game perfectly legally for 2-3 weeks, and got to level 22 with nothing more than an average Vaporeon to show for my efforts (including >100km walked). I started using this a few times a day to snipe Snorlaxes, and tbh if I get banned, it might be nice to have my life back.

quackyboy - August 19, 2016, 2:53 am

When I didn't put the right lat,long it gave me a soft ban so I'm guessing it's the area you are in same as bots

Mewtw? - August 19, 2016, 4:36 am

Do you know if the softban still exist ?

I don't think using a GPS SPoofer could get you banned permanently contrary to bots.

Am wondering if I should continue using PokeSnipe or not lol

ThisIsCyn - August 19, 2016, 5:58 am

For everyone that doesnt understand how this works what you do is input cords where you are located in the user document. Then when you go to snipe it uses an old trick and teleports there and doesnt interact with anything then clicks on the pokemon then teleports back mid capture this way it makes your device think you caught it where you where avoiding the softban. Problem with this is since you did teleport there is that trace but its unlikely just sniping will get you banned if you have atleast 1 minute intervals between snipers. Recommended go to a pokestop snipe one go to next pokestop (Pokestop with lures)
