Are the login details sent to our email? If so, I haven't received mine either and I'll create a ticket.

EDIT: Just logged in and I could see my username and password.

Does this support multiple devices and Windows VM's? Can we launch the VPN on more than one device without being banned?

I have two laptops.

Registered and payed but I dont have my settings for the VPN

Edit: I sign in another time and i have my account. Seems to be working

Edit 2: I think i need some config files, but i can't download says these archives was not found on this server.

1. Do you keep ANY logs which would allow you to match an IP-address and a time stamp to a user of your service? If so, what information and for how long?

2. What is the registered name of the company and under what jurisdiction(s) does it operate?

3. Do you use any external visitor tracking, email providers or support tools that hold information of your users / visitors?

4. In the event you receive a takedown notice (DMCA or other), how are these handled?

5. What steps are taken when a valid court order or subpoena requires your company to identify an active user of your service? Has this ever happened?

6. Is BitTorrent and other file-sharing traffic allowed on all servers? If not, why?

7. Which payment systems do you use and how are these linked to individual user accounts?

8. What is the most secure VPN connection and encryption algorithm you would recommend to your users? Do you provide DNS leak protection and tools such as “kill switches” if a connection drops?

9. Do you offer a custom VPN application to your users? If so, for which platforms?

10. Do you use your own DNS servers?

11. Do you have physical control over your VPN servers and network or are they hosted by/accessible to a third party?

12. What countries are your servers located in?

Apparently if you look closely at this checklist you'll see a bunch of ways you could expand your current company.

I'm quite interested in working with you, maybe in the next few weeks or months, cheers.

Just got my copy now , and I gotta say it's an awesome tiny app . No useless overcredits on the GUI just the vpn itself . Easy to setup portforward etc .

Although you should definitely add a "help" tab , or change the GUI a bit in the client , because it took me some mins to figure out how to actually find the server . (The circle next to UDP is almost transparent , it was a pain to find out what's wrong . Also you should add in the VPN client , that people need to use the username:pw that the site generates , and not the one they registered .) Oh and one more , at portforwarding , the same gui transparency thing , it was a bit annoying to find out where to put the port & IP since the lines and everything is almost white there ^^ Hope it helps !

Loving the VPN so far ! Thank you<3

I've used the tool, and attempted this on a new server. Still no connection through the port, I've also tried a different service to verify that it is open (other than canyouseeme), and still nothing.

The support tickets take 2-3 days to answer and the port forwarding isn't great. But the VPN itself is working.

I contacted his support on sunday, wrote him on hf on monday and send him an email yesterday.

I have his facebook profile so (last time he posted was the 2.9) ... either he's on vacation, his parents don't allow him internet access or his internet is currently dead or he is in prison or dead (I don't hope so) ...

Has anyone tried to contact him on skype?

Cryptic™ - September 30, 2016, 9:53 pm

Well OP has been dead since the 26th.

He started this company via my service [Want to Start up your Own VPN Service? Created many of HFs most successful companies!](#) by [Cryptic™](#)

His final \$210 payment was due on the 26th which is exactly the date he disappeared lol, what a coincidence.

As per our agreement his VPN management system license has been revoked until he pays me \$210, so even if he pays to get his hosting unsuspended, his VPN script will not work, which means all of his customers are left with a broken service that will not work.

Anyways since this service is probably going to be dead from now on, if anyone is interested in a free trial of CrypticVPN shoot me a PM. You will need to provide proof that you are a RoyaltyVPN customer.

Speeds with VPN United States <http://www.speedtest.net/my-result/5686906593>

Speeds without VPN <http://www.speedtest.net/my-result/5686919039>

Also when I try to use United Kingdom which is closest to me I can barely load anything. I can use google and ipchicken but most things never load, while they work fine without VPN and while using Unites States.

Using a VPN will most likely decrease your speed as it is mainly a tool to protect your original IP.

VPNs always slow down your browsing speeds as they just add an extra factor to your connections.

With that being said, RoyaltyVPN is a very good VPN, particularly for it's price and I would certainly recommend it. At first, I had some issues with setting it up, but the entire installation process is very straight forward and it works a charm!

Big props to ArtMachine and the fantastic product he is offering here, I would certainly recommend.

Looks like this VPN will be out of business until he pays me to get his license reinstated. ?

This doesn't mean that the VPN will be closed down. We are currently working on it and RoyaltyVPN will open again in a few days.

In the mean while: VPN client will be working for the existing clients. The suspension of the billing panel doesn't affect that.

L1l DuRk - December 5, 2016, 4:59 am

This is unfair bro, i paid and i did not get ifo about the config files or anything ...are you sure this service is still up or what ?

Bashkar - December 5, 2016, 8:06 am

I was supposed to get a refund over two months ago. ArtMachine keeps giving me the runaround and makes excuses about sending me the refund I was promised.

"As members of Royalty, we all vouch for this product cause we've been involved in the project since the beginning.

This product is also protected by the Royalty Buyer's protection, any deals below \$100 are covered by the Royalties.

If under any circumstances a scam has occurred, please contact Cibor or me to have the situation reviewed"

Do not trust these people. I was scammed. Fictional did nothing to help me. Cibor said "if he (ArtMachine) won't contact you with solution to solve the problem within 48hours I will refund you, feel free to provide me your btc address or paypal, whichever you used"

Yeah, I did that and look what happened. weeks later and Cibor finally replies, "he tells me that you bought 1 month, is that true?" I assume lying is a way to get you out of sending refunds.

My account was deleted from the site some months ago so I can't even use the vpn (had issues with it so why would I want to?). They gave me a code but in order to use it I must pay \$9.80 again for lifetime, so whats the point?

ArtMachine - December 5, 2016, 8:39 pm

Greetings,

I would like to apologize for the lack of technical support to our customers.

However, I would like to say that our service is back and ONLINE!

I have answered all your tickets. If you have any questions, please open a support ticket.

@Bashkar,

We do not grant refunds according to our terms, but however as you made a mistake (Bought Royalty VPN thinking that it will increase your Internet connection speed) I said that you can receive

a refund. However, due to some issues. That was changed.

As we had installed a new billing system, most of the people lost their accounts.

To claim your account again, Please send me a PM with payment proof. Thank you and apologies.
