Thread: [See a rare sighting? Post coords here! v4 \[COORDS POSTED ALMOST EVERY MINUTE!\]](#)

Forward™ - July 29, 2016, 3:12 am

[img]http://www.pokemongo.com/static/assets/images/pokemon_go_logo.png[/img]

Everyone knows what to do, please don't leech and contribute with the others.

If you don't know, this is a thread purely to post coordinates of rare pokemon, so people can use nox, or pokesnipe to snipe rare pokemon. I will be posting a lot of coords for pokemon so I decided to make my own thread.

Please put a pokivision link, name of the pokemon and approx time it will despawn in your post, thanks.

How to contribute with sending coordinates?

There are a few ways to get coordinates.

1. Go on a pokemon scanning site ex: pokevision.com and filter the unique pokemons. Start clicking until you find one and share the coordinates which you can find in the URL.
2. A lot of people who spam coordinates (I'm one of them) use discord, which is a chatroom. There are ALOT of chatrooms where people use exploits to obtain these coordinates and share them. Simply copy the coordinates and post them here Yeye

Prefer not having these questions on "how do you guys get coordinates?????" anymore

Goodluck Sniping..

How to Snipe Pokemon without getting a ban?

Spoiler [\(Click to View\)](#)<https://hackforums.net/showthread.php?tid=5351209>

Soft banned, and want a quick unban?

Spoiler [\(Click to View\)](#)- Information

QuickSpin is a tool to try to unban your softbanned account.

Uses the RocketAPI (GitHub)

- UsageVictoire

Run QuickSpin.exe

QuickSpin will ask for the information it needs to unban your account.

If you use QuickSpin frequently, edit the included user.xml to quickly load your info.

- !

Make sure the location you enter into QuickSpin is the location you want to be at, otherwise you just end up getting softbanned again.

A successful unban is not guaranteed due to the nature of the exploit.

Feel free to try again if it didn't work the first time.

- !

- Downloads

QuickSpin 1.0

Want a quicker way to snipe pokemon instead of using nox/other gps spoofers?

Spoiler ([Click to View](#))

PokeSnipe V2

<https://mega.nz/#!7VFjEbbT!DHwfln2nHv1uOA4Gi7ad4BJCjDK77fMhVsKOKnUrvhM>

Setting Things Up

Begin with editing PokemonGo.RocketAPI.Console.exe.config open it up in Notepad++ or preferred text editing tool.

Set DefaultLatitude to the latitude of where your character in game is.

Set DefaultLongitude to the longitude of where your character in game is.

Choose AuthType: Ptc or Google.

Ptc - Enter Username and Password in the fields named accordingly.

Google - You don't have to edit anything, don't touch the refresh token, that will be saved automatically later.

Running the bot

After you are done setting things up go ahead and run the bot.

You will be greeted by this <https://puu.sh/qeBVI/4b9d05dee4.png>

<https://puu.sh/qfYr4/203d681667.png>

Once we've found the coordinates of a Pokemon to snipe <https://puu.sh/qeCb4/a2a1094346.PNG>

Copy the link of those direction" the last part of it separated by / is the location of the Pokemon. In my case it was : 40.788268154987, -73.968539742814 <https://puu.sh/qeCAw/0975b00399.PNG>

Now we've got the Coordinates and the Pokemons name. I'll go ahead and type Venomoth in PokeSnipe <https://puu.sh/qeClv/de06c07399.png>

Now it asks for the coordinates. Ctrl + V the coordinates you got earlier.

You should be seeing something like this next (Your chosen Pokemon of course)

<https://puu.sh/qf7AJ/f3df95fe8e.png>

Missed a good pokemon? Post it here!

That's not always possible however if someone snipes it, they can see the iv and manually write it in the post. That would be a good idea.

I was having the same problem! Missed a Charizard because of it....

Just realised it's because of Max Pokemon!

Wildowak - July 29, 2016, 6:18 am

So you dont have to type all the cords

At Name "Pokesniper2" you see top left right click beside it and go to edit and copy &paste

I go to pokevision.com, filter out all bad pokemons, and just look for them then post coordinates or
others just go to pokesnipers.com and post all posted coordinates again..

Its a scrap snorlax that you transfer for candy. Not to keep. You go for a high EV snorlax (95%+) and catch the scrap ones for candy to power up the good one. Learn 2 play bro.

If you caught the 100 IV dragonite earlier, you scrap that 70 IV dragonite for candy to power up the 100 perfect IV dragonite. nothing will ever beat that 100IV dragonite from earlier.

curious.. I use the normal gps hacked app to stay in san fran.. is there a way to not be soft banned

and still go to these coordinates? I'd love to hit some of these nests but I'd rather not get banned honestly. Just staying in San Fran I haven't hit one soft ban yet.

Kekui - July 29, 2016, 11:32 am

Use a Pokemon Go Sniping software, I recommend PokeSniper2, it works quite well!

Teleport to the exact coordinates of the listed pokemon

Tap/click on it DONT DO ANYTHING AFTER THAT
Change back to your "real" location
and start cathing the pokemon
????
Profit ?

Got softbanned atm... :(

You should use NecroBot and just update the config.json everytime with your new coords and restart the bot. It'll scan after grabbing 5 pokestops, and will snipe it for you without getting you a softban. If you do by chance get a softban, it will bypass it.

Well the original coordinates you input on the PokeSniper, go to those coordinates on Nox and lift your soft ban. Then you should be good to catch Pokemon.

You can lift your softban by going to a Pokestop, and literally open it, spin it, close. Rinse and repeat about 40 times.

Usually when I get that error, I refresh a few times and then it works.

Valentino. - July 29, 2016, 3:05 pm

is it possible to copy/paste in poke sniper or do you have to type co-ords, if yes, how?

Do you have the default cords set in the user.xml file of the pokemon sniper tool. Those cords need to be the same as where your character is unbanned from.

Thank you bro!

cheetosbabyohyeah - July 29, 2016, 4:34 pm

I keep getting this error...

Recieved an error while running.

Message: value cannot be null

Parameter name: value

and then it says make sure the servers arent down and try again.
