PokeSniper2 V1.10 (Latest Version)

Posting a link to the latest Sniper as the last version had some common issues. Catch any pokemon you want from any location. I did not make this i am just sharing it with you guys!

HOW TO USE THE SNIPER (tutorial)

1. First You need to open and edit the user.xml file within the folder put your account information (ptc or google).

Spoiler [\(Click to View\)](#)

2. Edit the cords in the user.xml file to where you are currently are and your username/passwords depending on weather you are using gmail or ptc. (note if you are using gmail 2FA you need to go here: <https://security.google.com/settings/security/apppasswords> and generate a password and put that as your gmail password.

Spoiler [\(Click to View\)](#)

3. Run the program and press "y" and "enter" when it asks you to

Done!

How to use the autosniper feature (v1.6+ only)

Spoiler [\(Click to View\)](#)

After you edit the information in the user.xml file just click on the autosniper.bat File and it will snipe everything on pokesnipers.com for you!

Where can i find Cords for rare pokemon?

1.5? Why is the application title poke sniper 2 then?

Confused. Also what is the advantage of this over poke sniper 1?

No, it does not work at all.

This has been in the Haxton bot thread but unfortunately this does not work.

And this version was updated yesterday, not 15mns ago but thannks for community

Can you give me a brief overview on how this works? Put in your username and coords and that's it? Or do you have to find a Pokemon u want on something like pokevision and put the coords in and the name of the Pokemon?

Works pretty well. I couldn't get it to work at first but that was due to an error on my part. I had a bot running at the same time and it kept softbanning me so I was unable to catch any pokemon.

so does that mean you cant bot other accounts while using pokesnipe?

Cause it just says mine "Searching for aerodactyl in these coords" and doesnt catch it even after 2-3 mins of waiting.

It was working perfectly (without having a bot running), but now I'm running into the same problem as you.

Actually, I'm pretty sure our issue was due to server difficulties.

The most you will get banned for is about 1-3 hours.

You have to have the cords to a dragonite but technically yes. probably like 80% or a ban? does it matter you can just unban yourself anyway using the pokestop spinner tool in the thread ?

Yea thought it just automaticly catch the whole list. But after a while it will reload the list.

Can I use it with Necrobot or are there some complications?

Hi guys,

Wondering if anyone can help me. I've just downloaded the program after the older version stopped working and now the program won't work for me.

Received an error while running.

Message: Exception of type 'PokemonGo.RocketAPI.Exceptions.InvalidResponseException' was thrown

- Please confirm that the PokemonGo servers are online before using PokeSniper2.
- If the servers are up, just try again.

This is what it says anytime I try to snipe a Pokemon/use autosnipe. Any solutions?

Thanks in advance!

what this bot needs, is Autosniping.. along with Auto unban (QuickSpin) to use at the location of the pokemon but before it tries to catch the pokemon, it needs to go to it nearest pokestop and test if your banned or not... then unban it by keep spinning pokestop. then walk back to location and then try catch the pokemon (Y)

All it does is repeat auto sniping too fast and got me soft banned.

I don't know if it has a delay or something?? It would benefit that a lot.

If you use a bot open up the config file and copy the longitude and latitude into the sniper config file. If you use the default cords from pokesniper you will get soft banned.

You are softbanned, run the Quickspin app before sniping!

Or do a manual softban unlock, spin the pokespot go out, spin it again. untill it drops items.

I guess you don't want to use your phone for doing it, but you could use Necrobot/PokeMobBot (when PMB works) and use settings like 'keep all above 2000 CP' or 'only keep Dragonite, Snorlax, Vaporeon... etc' and when the bad Pokémon are transferred you can go snipe again :)
