Thread: [\[Source code\] VB .NET Spammer program](#)

**kr0sis** - July 29, 2016, 12:57 pm

I was browsing my files and saw an old Visual Basic project of mine.  
I thought maybe it would be worth the share... ?  
So here you go:

Program only:

[>Download<](#)

Source code:

[>Download<](#)

Virus scan:

Yes, when you click "start" and click somewhere else it will paste the text and press enter each chosen seconds.

You are not allowed to post ad links on this forum. I would suggest you host the code on github and give a direct link to that if you want to share.

We recommend you take the time to read the [HF Help Documents](#) section. The answer to your questions should be contained in there.

First look at it - does it simulate keys press? By the way you should post your projects on Github (or BitBucket) or on site without advertisement links.

Nice work but nowadays this really isn't needed.

Especially for Razer Keyboard users, You can make any key do a Macro on loop - Record a Macro of you pressing CTRL+V and hitting enter. Remove all Delay options (or set it to half a second or so) then click the Text box, Hit the Key you changed to a Macro and BOOM. Done. (The keys I use are basically any key in the Numpad Area as I NEVER use it)
