Thread: [Which ghost client?](#)

SIM-2735155 - July 29, 2016, 8:11 pm

This will probably have a lot of arguing, but i have some money, i want a ghost client, what do i buy? Vape, Incognito, some other one?

eZStrafe_ - July 29, 2016, 8:54 pm

I would probably choose Incognito

Slay - July 30, 2016, 1:23 am

Vape seems to be very popular and probably the most hidden.

Spook has files that are created after self destruct so you can be caught.

I don't know much about Incognito.

Autoclicker - July 30, 2016, 7:16 am

Incognito is fucking shit, vape is really good. your best bet for not being detected or found in an ss is a private autoclicker

Dreadmore - July 30, 2016, 7:44 am

I find vape on the daily when screen sharing kids, either the cracked or premium. I have never found Incognito after the 1.3.11 update. I have also fought so many vape people using basic incognito settings and rocked them. Incognito is a way better client compared to Vape. Trust me, go with Incognito.

Yassuo - July 30, 2016, 7:52 am

need to know man pm me

Mitlar - July 30, 2016, 7:58 am

Vape is overused and really detectable in screenshares. Go with incognito.

Manthe - July 30, 2016, 8:12 am

(Jul 30, 2016 07:58 AM)L????? Wrote: [\[CITE\]](#) Vape is overused and really detectable in screenshares. Go with incognito.

It may be true that vape is used a lot more, but to say it's "really detectable" in a screenshare is totally false - there hasn't been a solid way to find anything related to vape in quite some time, and each time there has been its rarely used and lasts less than a few days before its patched. Anything screensharers will do for vape now mostly consists of seeing if you're logged into www.vape.gg or looking for related skype messages, both of which prove nothing and the user themselves can clear

any of that easily.

AhmetGaming - July 30, 2016, 9:06 am

I recommend Incognito however, both clients are good.

TheSwaggyBacon - July 30, 2016, 10:36 am

Yeah I can agree with this lol the reasons I was caught with Vape was because I was stupid and didnt listen to clearing skype logs and clearing my autofill and history with Vape. But besides that haven't ran into a single person that could find my Vape that claimed they could lol

Autoclicker - July 30, 2016, 10:57 am

There seems to be a lot of autists just vouch for Incognito with false statements to. lol

That's because idiots like those cant keep to themselves and tell everybody about how they found the client which you later on patch. We both know there's probably ways to find every client, not just Vape. It just all depends on how fast someone can leak that method.

ckdks - July 30, 2016, 1:26 pm

I used vape on Badlion and never got caught, only did when I turned my reach up to 3.7. Reach was the only hack I used, as I could do well in any other aspects except rodding.

BuyMerge - July 30, 2016, 7:00 pm

I can. Will I? No, I don't want my method to get leaked for no reason.

TheSwaggyBacon - July 30, 2016, 8:34 pm

Well if you don't want it leaked then don't use it lol because the second you do someone will just tell Manthe and he'll fix it.

BuyMerge - July 30, 2016, 9:51 pm

(Jul 30, 2016 08:34 PM)TheSwaggyBacon Wrote: [\[CITE\]](#) Well if you don't want it leaked then don't

use it lol because the second you do someone will just tell Manthe and he'll fix it. Or you create a tool that does it automatically, and deletes itself after running. Also, make an external program that decrypts and runs the tool to prevent people just not running it.

Timi - July 30, 2016, 10:32 pm

In my opinion vape only because it can bypass screen share's and it works on badlion with really low settings

AhmetGaming - July 30, 2016, 11:15 pm

(Jul 30, 2016 01:26 PM)ckdks Wrote: [\[CITE\]](#) I used vape on Badlion and never got caught, only did when I turned my reach up to 3.7. Reach was the only hack I used, as I could do well in any other aspects except rodding.

lol i use reach at 4 never got caught or banned.

It's not like that can't be unencrypted lol and it'll just create the same process of finding a way to find it then for it to be patched and it just repeats.

BuyMerge - July 31, 2016, 10:06 am

LOL. You try to decrypt something encrypted with AES, tell me how that goes for you.

SIM-2735155 - August 1, 2016, 5:30 am

Another stupid question, is incognito or vape compatible with linux... or does it use a .net framework injector or similar that wouldn't run on linux

IBUYGUCCI - August 1, 2016, 5:43 am

True, Vape is only forge, Incognito is Forge/Vanilla/Optifine compatible.

johnnydajj - August 1, 2016, 11:32 am

Incognito sucks ass use vape. Way better

knuddlemuncher - August 7, 2016, 5:44 am

I'd like to give my opinion on his, just btw I know jack shit about the hacks I just cheat at mine craft. I've used spook since Last , got vape when it was released. I've been banned on badlion once with vape because I held down the rod trick button xD but other than that I've never been banned. I recently bought incog and used trigger as an autoclicker at 10 cps max, aim assist with lower than

default settings, and smart velocity and was banned on two accounts in less than a day. I can say that incog a aim assist is definitely better than vape 2.0's (make vape .28 great again) I could have just been banned for some dumb setting I had idk. But my point is that I recommend vape.

Yeah I thought I was the only one who thought that .28 Vape's aim assist was better than Vape 2.0's aim assist. I would use .28 but there's like 5 known ways to find that version that's only fixed for 2.0

AhmetGaming - August 8, 2016, 1:41 am

Lmfao. Both of the clients are undetected, must have been bad settings. I've been using cracked Vape for 4 fucking hours on Reach 6 blocks, Hitboxes max, velocity both 0%, autoclicker at 20-20 fucking CPS and didnt get banned idk what is wrong with gcheat but they see to not detect 20cps right now...
