Thread: [Fresh dorks to find SQL dumps or sensitive information.](#)

robertad - July 30, 2016, 12:41 am

Post these on exploit-DB if you want (I think some might be accepted)

1:
Code intext:Dumping data for table `user` # INSERT INTO user VALUES (1, 'admin
2:
Code intext:"Dumping data for table 'user'
3:
Code intext:INSERT INTO `ADMIN` VALUES4:
Code inurl:ftp + filetype:sql + intext:Dump
I was able to break into multiple admin accounts with these.

surelyenough - July 30, 2016, 12:57 am

They're not going to be accepted because they're common sense and have been used for decades.

Simon. - August 1, 2016, 12:13 pm

Yep they wont get accepted they are to old and has been used for way to long.

LadyShakti - August 2, 2016, 12:17 am

Thanks for these dorks. But i am beginner in hacking stuffs. I learned some programming language from my teacher but now i want to learn hacking concepts. My teacher advice me to learn logics of hacking and not to learn facebook hacking.

Can you please tell me how to use those above dorks for hacking? I already know google hacking concept like intext:,inurl but i want to know to use for hacking purpose

robertad - August 2, 2016, 12:20 am

Paste a dork into the Google search bar.

intext:Dumping data for table `user` # INSERT INTO user VALUES (1, 'admin

That'll bring up a bunch of SQL dumps titled phpMYADMIN Dump
Their will probably be admin login information in the dump which you can use to log on (if the password is encrypted, you'll need to crack it), ect.

LadyShakti - August 2, 2016, 12:26 am

ooh i got it. i coded basic websites using phpmyadmin. so by using that dork we can get phpmyadmin wow.
