ok so i have beeb browsing the keyloggers and almost all the free keyloggers downloads are with \$harecash. so basiclly i dont know how to get rid of the stupid offers, how do i get rid of them or is there any good keyloggers with a download that dont involve offers. I am looking for a keylogger that i can send to someone and then they open it and it send me the information that they typed. Please help me find one

please suggest some keyloggers without \$harecash if any lol

sharecash is simply a web site that host's the keyloggers, you download it from them, its annoying, but they do that to annoy you, so you won't download... they don't want everyone to have it, else it will get detected quickly.. so, its working
