QuickSpin - PokemonGo Softban Unbanner - Quickly unbans your softbanned account

- Information

QuickSpin is a tool to try to unban your softbanned account.

Uses the RocketAPI (GitHub)

- Usage

Run QuickSpin.exe

QuickSpin will ask for the information it needs to unban your account.

If you use QuickSpin frequently, edit the included user.xml to quickly load your info.

- !

Make sure the location you enter into QuickSpin is the location you want to be at, otherwise you just end up getting softbanned again.

A successful unban is not guaranteed due to the nature of the exploit.

Feel free to try again if it didn't work the first time.

- !

It has worked for others and also for me while testing, so this tool has been made to automate the process.

Yes, Google login is working.

Do not use the Google refresh token. You have to enter your Google username(email) and password.

If your Google login is not working, Google may be asking for a captcha because of too many failed logins, or you are using 2-factor authentication which is currently not implemented in RocketAPI.
