Thread: [Internet disconnecting every 10 seconds then reconnecting](#)

Uploader.sx - August 5, 2016, 8:32 am

Hey guys, i've been facing a problem lately, every 10 seconds, my computer's internet disconnects for like 2 seconds then re-connects.

Any thoughts/help ? Thanks?

Run Malware Bytes, Look in your processes for anything suspicious, and/or restore your pc to a later date but not so far where you lose files you use/want.

Also, should get Advanced SystemCare Program and run it. It will fix and clean lots of problems some programs won't.

I think its a cable problem. I restored my pc for like 1 week, and still.

If you're using a wired cable, check the link lights on your system (Green/Orange flashing lights near the cable) to see if they also go out.
