Tool 2: FaceWizard 2.0.12.0

FaceWizard is a marketers dream, It combines all the tedious and time consuming jobs of marketing on facebook and bundles them all up a slick 'ready to run' automated marketing tool.

There is NO other tool on the market that can do what FaceWizard does, it is a 'one of a kind' software that will literally catapult your marketing campaigns to another level and beyond overnight.

Have you ever seen those fans pages that seem to gain 10,20,30 thousand new fans every few hours and wonder how they can possibly be growing so fast? Well FaceWizard is the answer.... With FaceWizard you will also now have the ability to create these massively profitable viral pages with little more than the click of a button.

Not only will you be able to create hugely successful fans pages but you will also be able to quickly build and manage an army of friends over a multitude of accounts with FaceWizards powerful 'targeted' friend adding and account maintenance capabilities.

Adding just 10 - 20 friends per day over 1000 facebook accounts and also using FaceWizards 'commenting' feature to comment on 'status updates' (a great way to get people to add you), will soon have you literally hundreds of thousands of friends all under your control.

Once you have these friends you can now use FaceWizard to invite them all to your freshly created fans page causing a viral effect, comment on status updates, change your accounts status, accept incoming friend requests and a whole lot more.... all of which means BIG \$\$\$.

Tool 4: Market Samurai

The best keyword analysis tool

Every web-site needs traffic if it's going to succeed - and the most reliable, consistent, profitable, high-volume source of traffic comes from search engines.

All it takes is getting 3 SIMPLE things right! - the 3 Golden Rules...

But 99% of sites get these 3 things wrong (without even realizing it at the time) - and as a result, the odds of success are stacked against them, making good profits (not even big profits) becomes a massive struggle...

...And, as a result, 99% of sites fail!

Find out how to uncover "gold-nugget" keywords – each of these keywords can send hundreds, even thousands of free visitors to your site each day.

Stop attracting time-wasting tire-kickers to your web-site, and target the keywords in your market that real buyers are using right now.

Discover exactly how to beat the competition, and get front-page rankings in Google for high-traffic keywords in weeks or days – not months or years.

BEST SEO TOOL 1 : Scrapebox V1.12.16

I suggest u to run it in Vmware/virtualmachine (i got no review)

About it:

Harvest thousands of URL's from Google, Yahoo and Bing in seconds! With inbuilt footprints for finding Wordpress and Movable Type blog posts, you can gather lists of links that are highly relevant to your keywords and niche. Great for researching competitors, finding new blogs to comment on, doing product research or even gathering facts and info for your next blog post or article.

Don't want Wordpress or Movable Type URL's? No problems, you can enter your own custom search Footprints and ScrapeBox will store these so you can build up your own Footprint Library for future use. For example you can store site:.gov and ScrapeBox will search amongst the 242 Million

indexed pages on .gov domains that are currently listed in just Google alone. Or you could add site:yourdomain.com to keep track of the amount of pages Search Engines have indexed on your site, or extract those URL's so you can obtain backlinks to them all to rank and dominate your competition. You can also Import and Export keyword lists as regular .txt files so ScrapeBox makes a great utility to use with other Keyword and Seo Tools. The possibilities are endless!

Lol, it doesnt has virus, but the thing is all these black hat softwares are detected as virus by av.

And who knows someone might have attached a virus to that and spreaded them.

I am sure this guy didnt, but it might be the one from whom X-bo took it.

Its better to use it on VMWare.

Blackhat SEO on the other hand, is only blackhat because it is illegal to do. For example, Adsense. This kind of SEO goes against Google Adsense TOS.

this thread is old man.. no wonder the links or programs are not functioning!! Also these methods are to be used with caution as stated.. too much could get your website sandboxed!! And that is not good..lol

GOOD LUCK!!
