How the hell is this cheap? When you can get a 7\$ vps and run bots on it too. Given the specification of your servers you are quoting a decent price but bots which run on c language dont need such specs

It is cheap, and the specification is true.

No one in HF like to buy things expensive and who sell in HF should cheaper than others website.

what the actual fuck? 25\$ is worth nothing when you could open your own pokeshop and make a bigger profit.
