Now what to do? :D I only downloaded Phantom for snap this far

MrARM - August 7, 2016, 12:12 pm

Anemone, Download/buy some theme you like and customize your device.

If you are into programming or hacking some tools and languages some are compiled for it.

Hoodie+ - August 7, 2016, 12:13 pm

Quick Tip: Don't add random repositories to Cydia, you can get your phone infected with malware.

Was downloading Anemone while opening the thread haha

How do i find a good theme for anemone?

I only added the one Everythingapplepro included in his video :)

Vegeta - August 7, 2016, 2:29 pm

I would find one really cool theme, this is the one I used to use:

https://www.reddit.com/r/iOSthemes/comments/2r45jz/custom_glyphsgotham_icons/

Not sure if it will work with the latest update, but I would go on youtube and look up top 10 themes and such. They have a lot of good free ones as well.

You should get Priority Hub, it sorts notifications by app when you're on lock screen, it's quite useful. Also try Activator and Flex 2, nice little things there.

RelationShit - August 9, 2016, 5:53 am

AdvancedSettings8 (set animations overide to 0.20 for UBERfast phone))

iCleaner Pro (do a clean up may clear 1gb data)

Depthicons

Localiapstore (free app purchases)

Filza

Bioblock or something

appcake (free apps)

appsync unified

activator

batterypeek

batterylipe

polus

dissident ?
dismiss..... forgot name
etc

U need those if ur phone ever bricks:

OpenSsh

openssl

mobileterminal

apple file conduit 2
