Thread: [~~ SENTRY MBA Numbers Explained ~~](#)

Alprazolam? - August 9, 2016, 10:12 pm

I used to have a hard time with this, but this is just to help you friendly people out. Here ya go!

200: Means Everything Worked As Expected Or Standard Response For Successful HTTP Requests.

3xx: means Further Action needs To Be Taken By The User To Fulfill The Request.

400: Means Bad Request Or Offered An Invalid Input Parameter.

401: Means When Authentication Is Required And Has Failed Or Has Not Yet Been Provided.

403: Means Access Denied. This Includes Insufficient User Permissions To Access A Resource.

404: Means Resource Not Found Or may Be Available Again.

407: Means Proxy Authentication Required

413: Means Request Entity Too Large. The Request Is Handling Too Much Resources At Once.

419: Means Authentication Timeout.

420: Means Method Failure.

421: Means Connection Limit Exceeded Or Service Not Available. (You Are Downloading With Too Many Connections At Once Or Your IP Is Banned/Blocked.

430: Means Invalid Username Or Password.

5xx: Means Syntax Error, Command Unrecognized And The Request Action Did Not Take Place.

This is super helpful, thanks for posting this mate. It will really help looking at Sentry MBA and trying to decipher the damn program lol

booger99 - December 6, 2016, 5:58 pm

Finally a good tutorial. Thx buddy!!

Faith Connors - December 6, 2016, 6:06 pm

These aren't just SentryMBA "numbers." These are HTTP response codes.

True but lets face it, people want these for Sentry MBA mostly lmao to find out whats wrong.

Description - December 6, 2016, 8:17 pm

I was about to post something like this a few days ago lol

Helpful for those who didn't know.
