Thread: [Minor Trust Scan Bug?](#)

**Knucklez.** - August 10, 2016, 3:18 pm

Update: Probably misunderstanding.

a few errors while looking at trust scans. Not all accounts have this problem.

These are some strange ones. Nice found.

**V For Vendetta.** - August 10, 2016, 3:26 pm

Unless I'm mistaken,

Password Reset = Forgot my Password (receiving a temp password), and changing it through there.

Password Change = Changing your password via userCP.

Password Change = Changing your password via userCP. I think you're right now that I'm thinking about it.

In that case, "password change" should probably include password resets to avoid confusion. I mean, your password has to change when reset, right?

Yeah but I'd argue that the difference exists to point out whether the password was simply changed after a reset, or whether it changed via usercp. Pass change via usercp= no access to email vs pass reset = access to email (for hacked HF accs, to determine whether the hacker has email access as well.
