Thread: CSGO Game Lag [ping absolutely fine]

RandomAdult - *August 11, 2016, 2:16 pm*

I will make this short and sweet cant find any threads like this or any threat that will help.

Been playing cs-go for some months now Gold Nova ||| nothing much but not been playing long.

I have been playing fine smooth loving the game, today all im getting game lag and stuttering every 5-10sec i have googled the issues done most thing google told me to do from putting -processheap -high -novid -threads 4 into launch options, updating graphics and updating sound, and making sure google chrome is turned off correctly but still get this god dam game lag.
My ping is a nice 30-55 so its not internet connection

I have done more research and people are telling me to format my full PC and dont save anything (are they mad)

I have no clue how to solve this and need help !!!!!

FIXED thanks to Draig9

nothing special, getting a nice static 100 fps, the issues has only come along in last 12/24hrs.

Its not fps nor is in pin, people are telling me it could of been a update from windows.

Like i said have been playing play and good last 3-4 months just today this lag ?

Like i said have been playing play and good last 3-4 months just today this lag ?not packet loss? If not and you have changed something today/before you last played before the lag revert it to what it was before and see if the problem persists.

see that is with net_graph 1 now see if your loss / choke is high

PlatinumD - *August 11, 2016, 2:49 pm*

http://prntscr.com/c4ldlm

You're looking for the number that's after Loss on the graph thing. If you have loss it means your ISP is probably having issues usually (I think)

i can confirm im getting a loss of 12-1 when this lag happens.

Hope you can help

i also get a loss of 52 static when map is loading
