Thread: [Best way to get someones IP over skype, without using wireshark?](#)

Popes. - August 13, 2016, 12:01 pm

The name of the thread basically says it all. I am wanted to get peoples IP's over skype, but i want to know more methods than just wireshark. Is there anymore? If so, please reply down below letting me know! ;p

Thank you.

Google "Skype resolver" and use that.

Vassilios - August 13, 2016, 12:03 pm

After a Skype update you are no longer able to get the IP of people because Skype prevents that. If the account is older you may get lucky with a Skype resolver otherwise you cannot.

Lipton's Ice Tea™ - August 13, 2016, 12:06 pm

If the person you want to get the IP of you're able to talk to, give him an IP tracking link like #.

Welp HF blocks me saying that for obvious reasons, google Ip trackers.

Skype resolvers don't work anymore, nitwit.

Yassuo - August 13, 2016, 12:07 pm

Get a skype deob but most of them are infected lel

Welp HF blocks me saying that for obvious reasons, google Ip trackers. That is true! Just tell him to check out this funny image or whatever and if he clicks then he is done.

An image IP tracker.

That is true but the individual I am trying to get, knows about Grabify IP loggers and what not.

After new skype update skype resolvers sadly do not work anymore, you can TRY and get IP from database (if someone resolved that user before) but that's about it.

spooky hacker - August 13, 2016, 12:13 pm

<http://skidtools.net/>

<http://skypegrab.net/iplogger.php>

Nmap, beEF, Skypedeob

OP, Wireshark is your best "public" method of gathering IPs of people from Skype.

Skype resolvers will always work, it just depends on if the person has the new updated Skype. I know plenty of people who have yet to update their Skype and are vulnerable to being resolved. If you're dealing with someone who uses Linux, unless they've disabled resolving via the config file they can be easily resolved.

I'm assuming most people already updated to the new version of the skype, it's been all over the HF/internet that you should update because of IP resolvers

I can think of at least 7 people who have not updated to the newer version of Skype, sure a lot of people have but not everyone. Also, a lot of people nowadays use Skype for web. If you want someones IP from Skype try Deob, try to resolve them or use wireshark. If none of those work than go to the old fashion ways of sending ip loggers and sending them a file and wiresharking them that way (not sure if that works anymore).

THC - August 13, 2016, 2:49 pm

I would recommend just using skype deob, it is one of the most consistent methods for getting IPs.
