Thread: [\[HUMAN\] All in One PokeMobBot Setup w/ GUI & Sniping! \[UPDATED 8/22/16\]](#)

Herbert The Pervert - August 14, 2016, 8:24 pm

NOTE BOTTING OF ANY KIND IS NOT FULLY BAN PROOF THIS IS JUST MY SETTINGS!

All in One PokeMobBot Setup with GUI and Sniping!

All in One PMB Download

https://mega.nz/#F!TJpQmILD!20pIEGsSifFI4kQmdvh_w

Steps:

1- Download and extract all the programs

2- Run PokeMobBot.exe

3- Press any key to create the config folder for PokeMobBot

4- Change the config.json file in PokeMobBot/config to the config.json file in the folder

PMB_Human_Config (CHANGE DEVICE ID)

Example: Spoiler [\(Click to View\)](#)Code 20168c63620b6d4a

Change like 3 numbers in the Device ID

20158c73620b9d4a

5- Change the Config files in PogoLocationFeeder.v0.1.8/config folder to the config files in PogoLocationFeeder_config folder

6- Run PogoLocationFeeder.v0.1.8.exe

7- Run PMBVisualizer.Setup.1.0.8.exe

yahoosquad - August 14, 2016, 10:33 pm

Worked well for me.

Did it on 3 bots, third bot got softbanned, for some reason but still running 1st bot on the visual and was able to run 3rd bot with standard pokemobot.

was working with sniping but after i got softban i turned it off

update it was my latitude that got me softbanned. starting in the sea does that

Honzik - August 15, 2016, 12:43 am

Hello, can you please help me my Pokemobot just wont snipe.

Update: It works now.

Giving this a try now, currently getting 23k xp/h in my local town. Better than nothing...

UPDATE: Been running for 2 hours, currently lvl 12, averaged out at 15k xp/h. Still not bad, better than having to go out and catch them all myself!

Herbert The Pervert - August 15, 2016, 8:34 am

13-15k but I'm sniping really good Pokemon and the new ban happens when you catch more than 1000 Pokemon and collect 2000 PokeStops in 24H. So I'm happy with these settings ?

Don't you get banned for sniping?

I'm gonna test this out now on my account that's currently botting.

I assumed sniping = ban.

with my configs the sniping is slow enough to use safely

My next question was going to be.. I have run this for like 10 minutes now but it hasn't yet caught any of the Pokemon in the Location Feeder.

I wondered if I had the correct one open (GUI) which I'm pretty sure I do.

But if it is in the config that it is slow. How slow we talking?

The sniping works, it logs them and then snipes them when it reaches a safe point to start sniping

Monostable555 - August 15, 2016, 12:38 pm

Thanks I'll try this out later and get back with my thoughts!
Thanks for sharing this!

SIM-403479 - August 15, 2016, 1:11 pm

I have tested this out fully now and works perfectly. I would recommend it to everyone else to use.

I'm going to run this all night and maybe all day tomorrow to see if I get banned or not.

Gonna have some good Pokes too.

Tyl3r - August 15, 2016, 1:15 pm

Works great but I forgot I logged into my account to see if it was banned this morning, and I am getting the CatchFlee ban thing. OOPS.

Guess I'll start a fresh account today and wait for the CatchFlee Ban to go away lmao.

Tyler777 - August 15, 2016, 1:25 pm

Just use unban feature to spin a pokestop until ban is lifted takes about 30 spins.

I think this has been patched now. There are a few different types of bans instead.

You can now get banned for up to 24 hours from visiting poke stops. The same for catching pokemon.

I think this is what he means.

I believe the Pokestop spin method has been gone for like a week now. But i don't think there is a method to bypass the new bans

What lvl does it make sense to start sniping at if you're going for rares like snorlax/dragonite? I'm trainer lvl 20 on my bot using a farming config but want to snipe some good pokemon soon

Also you need to change the type from google to ptc.

This should fix your problem, let me know if it doesn't.

You can use whichever you prefer.

The only reason people use ptc accounts is that they are better to sell. It is hard to sell a google account because of the security on it.

If it's for your personal use, google is fine.

You need to open all 3 files then it will automate everything.

It will snipe all the pokemon which come up on the feeder. Basically all the rares which get posted on there.

PokeMobBot (C#)

Has randomised sensor data.

However this is completely worthless because every single field can be deterministically calculated from accelNextX, accelNextY, accelNextZ. All Niantic has to do is plug in the formula and check if the other fields match and bot will be detected.

SessionHash field is hardcoded, with the same values as Necrobot. Altitude is hardcoded in the config.

Note that ANY amount of hardcoding will make the bot extremely obvious to detect, flag and ban.

Our "hardcoded" values for SensorData are fine and well within the range of human data, we had that based off of an ACTUAL PHONE WE RAN AROUND WITH YOU IDIOT.

The fucking game client updates the server with SensorInfo like once every five seconds or so, there's no "movement" detected realistically and it's always seen as "random data" but if it's within certain ranges of reality then it's fine.

Don't go based off of an ill-informed reddit post with a whole 9 upvotes. ?

It takes a while for the sniper to kick in. But it does work if you have the sniper & the bot open at the same time.

The bot goes to a safe place before using the snipe.

using this bot, thanks for packaging the rest in too. What do we need the pokemon feeder for? just for sniper2? also wont that make us get banned?
thanks

Buzzle - August 16, 2016, 1:47 pm

First of all, this bot, to me seems amazing.

However, I believe it won't be of much good use until the banning and mass botting die down a bit. Or if given enough time to figure out the best ways to bypass bans.

It's prob going to be even more painful for us botters for a while. Though I believe "we" will win in the end. Only time will tell.

I'm going to experiment quite a bit with this bot over the next week at least, and we'll see what happens.

Personally, I'd be happy being able to get an account to 30 by using this bot with these configs (sniping here and there). From there I'd be able to play legitimately just fine.

A lot of people are saying this. It does work if you have it open.

It doesn't snipe them straight away. It waits until you are at a "safe" pokestops and then snipes.

Nice work so far. I botted a test account from 0-18 with this in about 6ish hours of running it and no bans at all so far.

Does anyone know the risk of using the same bot/settings and just changing the account multiple times a day? IDK if there is like a IP check or something from niantic. Not simultaneous botting, but just one after the other.

Also, does changing the Lat/Long make a difference?

Lets say i want to set it to my home town's Lat/Long (I know it would be slower pokemon and rank than NYC) but would that be safer? Because i could log in on my phone from my house to check things and manually do things. Would this work?

Interesting bot, I didn't tried this one I've some blank accounts lets try

kniff - August 18, 2016, 1:27 pm

How can I make the bot not transfer Nidoran?, because I cannot make it work. Has anyone fixed this?

(Aug 18, 2016 12:51 PM)Slippin Jimmy Wrote: [\[CITE\]](#) Nice work so far. I botted a test account from 0-18 with this in about 6ish hours of running it and no bans at all so far.

Does anyone know the risk of using the same bot/settings and just changing the account multiple times a day? IDK if there is like a IP check or something from niantic. Not simultaneous botting, but just one after the other.

Also, does changing the Lat/Long make a difference?

Lets say i want to set it to my home town's Lat/Long (I know it would be slower pokemon and rank than NYC) but would that be safer? Because i could log in on my phone from my house to check things and manually do things. Would this work?

anyone have any info on this above please?

Will check that out.

And if that is the case, some of you must have made an exclusion list of Pokémons that we want to save from auto transfers.... Please provide the same.

Secondly, can't there be a single line check; not to transfer Pokémon above 1k or 1.5k CP value?

So I've been using these settings for exactly 1 hour on a fresh account and got soft banned already. The sniping is what is killing accounts so fast. Just have the bot walk and catch everything in the area and collect stops at a human rate and shouldn't get banned.

Obviously tweak to more up packed human setting... That's just my opinion.

You should change the device ID every time you start a new account. I would remember the device ID per account. Or just copy the folder twice and keep different settings for each account..

The sniper message keeps coming up but it doesn't seem to be catching any of these pokemon. Is it because I am a low level and unable to catch them? I'm level 10.

If you look it is trying to snipe pokemon which haven't actually been released into the game. People

are putting these up on the sniping sites but they don't exist.

You can take these out in the config on the pokesniper. Let me know if you can't find it and I'll help you.

I see it, I think I'll use the config file with more on in order to gain more pokemon for now. I'm new to Pokemon Go, which pokemon are not on the game yet?

Basically all of the rares, the rare birds, new, mewtwo and ditto.

All the rest you're able to catch but I remove a few which I don't deem as very rare.

Just snipe the Pokemon you want to catch rather than them all.

It will just be because people are posting fake coordinates to mess up people's botting probably.

You can always just turn it off and bot without sniping. It is still decent xp but without the rare Pokemons.

There should be a new bot soon which is a lot more efficient.

To turn the sniping off just close the sniping application and just keep Pokemobot running.

You can close any of the applications except the Pokemobot and it will still run smoothly. The other two applications are sort of add ons.

Hope this helps.

I have just checked mine and it doesn't seem to be working at all.

I think it's because people are flooding it with the wrong co-ordinates so your bot will search them all and eventually crash.

Just turn it off for now and it may get fixed in the future.

Is the sniping currently working for you? When I run the sniper at the minute it appears that a lot of fake listings are being posted and therefore making the bot crash.

I am running the sniper and the bot is not crashing.

Secondly, like it sniped Poliwhg for example, and bot tries to catch it in a while....

What I mean is that my sniper is showing like 20 pikachus/20 dragonites etc all at one time. The bot then tries to catch them all in order but none of them exist. Once it has tried the bot gets the overload message and crashes.

It works without the sniping.

No. It snipes any Pokemon on the location feeder. It carries on botting where it is, but then just spoofs the location and catches the Pokemon.

New versions of PogoLocationFeeder & PMBVisualizer have arrived.

Are you guys sticking to old stable one's only? or what. As OP also asked to override some config files in PogoLocationFeeder too....

I only use the location feeder, if it stops working then I will update it.

The visulaiser seems a bit pointless in my opinion.

T O P - September 4, 2016, 11:17 am

If I wanted to change my location, would I just change these values?

```
"GeoLocationBounds": {  
  "SouthWest": {  
    "Latitude": 40.60414973724572,  
    "Longitude": -74.2335024050293  
  },  
  "NorthEast": {

    "Longitude": -73.660840051513674  
  }  
}
```

What does it mean by SouthEast and NorthEast?

I just edited the config myself. I'm not sure what he actually changed originally.

If you look in the config file it is quite straight forward to edit yourself. I removed some of the shit Pokemon from the catcher and left the decent ones.

Mate there are multiple criteria in the config file.

You must have stated Pidgey in the Ignore list, but it is being caught as it is satisfying some other logic/criteria in the bot.

or it will just walk randomly that after 1 hour It may be 10km away?

To best off my knowledge, it is random walk with set speed n all. But you can't decide the area.

botrus - September 28, 2016, 7:26 pm

I have been walking in Santa Monica for 3 weeks now no issues about to hit Level 36

Got good nests around where you bot? :D. My nest just turned into a diglet nest. Looking for a charmander

botrus - September 29, 2016, 4:26 pm

^^ Nope Santa Monica is like all stupid ratas piggies and zu bats but you get lucky and get a few rares but not many.

I just hit 36 today still not been banned start at 32 with hexxon then when with this bot with the human config it's slow but it's working

I get it all the time. I notice it too when I close my locationfeeder.

edit; have they stopped updating the bot completely?

No, they're still working on the project

botrus - September 30, 2016, 9:19 am

I think ptc is down or the bot is broken right now for me at least

?Kamalu - September 30, 2016, 11:43 am

PokeMobBot isn't safe either, be careful

botrus - September 30, 2016, 7:34 pm

u can't connect to it anyways my account is still good have to see what will happen level 36 :)

You pretty much said what the tweet just said....it said "any" bot. My question is, anyone have a Pokemon live feed map?

BTB™ - October 1, 2016, 5:20 am

BOT is not working!

Seems we will have to wait for updates.

botrus - October 1, 2016, 10:27 am

^^ Just got my account banned with human config and this bot just saying rip another level 37

I always get banned when I'm over 36 on any bot

I just need to be a pleb with my main level 34

seenhoe33 - October 2, 2016, 5:25 am

What if players from Asia who still using 0.37 api?

Do they still safe to bot until the next update?

danaox12 - October 2, 2016, 9:00 am

Awesome, will surely try this one out.

HellMaster89 - October 6, 2016, 12:02 pm

so on the next updates we will have to confirm that we are not bots... how are we going to work passed that ?

Buzzle - October 6, 2016, 5:56 pm

Have they stopped updating this bot?

Epic Klay - October 6, 2016, 7:07 pm

Bull shit, you need to get 70kexp/h every hour for a whole year to get to lvl 40. Can't do that with out botting.

HellMaster89 - October 7, 2016, 11:28 am

regardless...we need a update on the bot and something for the captcha to come

Technically you would need 54,794.52054794521 XP PER Day within a year period, and the game was released July 6th.

July 6th until now gave you about 93 days to collect XP, so in 93 days you would need to collect 215,053.7634408602 XP Per day, which is technically impossible, you have been caught lol...

HellMaster89 - October 16, 2016, 2:39 am

No updates for this yet ?

Herbert The Pervert - October 17, 2016, 2:07 pm

Update from PMB

As we are still waiting for the new Pokemon Go Updates to be cracked, there is now an ETA for this Sunday.

Marvinjoson - October 21, 2016, 12:28 pm

Hi dude, where can i download latest updates?

poketad - October 21, 2016, 11:26 pm

Hey, the bot doesnt seem to be working for me, I was wondering the current status of it and if anyone could walk me through it to see what I'm doing wrong. Thank you for your time

? TAQ ? - October 22, 2016, 12:01 am

To everyone posting today asking about updates/bot not working, I think Herbert said the new API will be coming on Sunday, so there will maybe be an update for everyone on Monday.

DrKill69 - October 23, 2016, 10:49 am

Hello man ! Thanks I'm going to try this in a bit.

gtorly - October 23, 2016, 6:12 pm

Thanks for sharing! Trying it out when I get back from work.

Heisenberg84 - October 29, 2016, 5:04 am

Hi, currently I got this error:

(ATTENTION) No usable PokeStops found in your area. Is your maximum distance too small?

is this due to API change ?

EdgyRevenge - October 30, 2016, 1:30 am

Im waiting to try! Will be watching this thread for any update to the API and what not. Thanks btw.

Softban there mate; if you read back in the earlier pages of the thread this was quite common.

I haven't been to this thread in a while.. I wonder how the pokemon botting scene is going.

Yo Herb, still got same bot ban issues? I was thinking of selling more PTC accounts Imfao.

Pokefarmer
Ninja
Catchem (maybe)
GoManager

Should see more within the week.

I'm more surprised at how many people still want to bot.

Also appears like Gen 2 will be out "soon." The protos are there, and they usually add stuff in an update or 2 prior to releasing.

It's nice to have some stardust and levels for when the new gen comes out I guess. I wouldn't mind botting.

Mountview - November 8, 2016, 8:09 pm

I think botting will boom again when they introduce a trade system...depending how they implement and regulate it. I can imagine botting/sniping specifics and trading to mains will happen a lot!

Bot's been dead for months. Even if it came back, it's very basic compared to the others already out there.

Bot's aint dead.. you just have to buy the API which most people dont want to do.

Directly from their server back in November

Quote:Forgive me that under these circumstances I currently do not want to releasen any update. PokeMobBot will continue to be known to be one of the safest bots.

PokeMobBot is dead.

Current popular ones are:

PokeFarmer

GoManager

Poke.Ninja

Necro2

Each has its own unique things.
