Thread: [I forgot winrar file password](#)

master.bob77 - August 15, 2016, 5:44 pm

I had created a file last night and forgot its password. What to do now? Please help...

Zebra_ - August 15, 2016, 5:45 pm

this is most likely untrue :P winrar doesn't require a password if it was made on your computer.
if it wasn't made on your computer the only method is bruteforce

If he did set a password while creating the rar then it will ask for the password even on his computer

You can use brute force. But you must spend some time

master.bob77 - August 17, 2016, 9:52 am

@kartveli1, please help me...

You know you can archive files with password protection right? I had a winrar file of some shit that I forgot the password of for 3 years. I had been close for a while it was just a capitalization issue.

I looked into it for quite a while and it seemed brute forcing was the only option, which I had already assumed anyway. GL OP

was the file that important? doesn't seem like it if you forgot the password. If it was really important bruteforce or use brain.exe and figure it out

github.com/magnumripper/magnum-jumbo

Cracking a RAR file is extremely slow mate.

kartveli1 - August 22, 2016, 10:39 am

Use Rar password cracker. It is simple to use
