Thread: [PHP ddos shell](#)

Laku - August 16, 2016, 7:29 am

Hello

I have been looking for any php ddos shell that can be executed in this way for example:
url.com/ddos.php?act=phptools&host={HOST}&time={TIME}&port={PORT}
If somebody has this please help me out.

Jowan - August 16, 2016, 7:30 am

That's just a normal shell?

Laku - August 16, 2016, 7:33 am

im looking for one who has port not just host & time

Doctor Blue - August 16, 2016, 7:42 am

You just need to find the place in the script where the port is used and then change that port to `$_GET['port']`. It's pretty simple.

Laku - August 16, 2016, 8:00 am

Yeah but there is only host and time not port and thats what i want to add the port
shells i found have only host and time

Im making booter and thats the reason i want that shell. But my booter panel has time, host/ip, port
so the shell source that i have found [pastebin.com/nGKcFzcr](#) doesn't have port but it has only host
and time

Linus Torvalds - August 18, 2016, 8:34 am

I was just making a quick script for you and it absolutely slams. ?

Output from a 10 second attack.

i-manuel - August 19, 2016, 7:31 am

Easy way.

Linus Torvalds - August 19, 2016, 7:49 am

But not as effective seeing as no symbols are used within the data. Also you're not randomising the
packet each connection therefore it wouldn't be too difficult to filter. However nice lightweight code.
Perhaps you should consider putting your packet declaration inside the while loop so it generates a
new packet each connection.

liumbiwe - August 19, 2016, 8:22 am

Is it possible to multithread this ?

Linus Torvalds - August 19, 2016, 8:28 am

If you were to do it on your own server with the suitable pthreads version installed sure, otherwise multithreading php looks dim for this.

liumbiwe - August 19, 2016, 10:40 am

How you managed to get this results.

Linus Torvalds - August 19, 2016, 11:08 am

(Aug 19, 2016 10:40 AM)liumbiwe Wrote: [\[CITE\]](#) How you managed to get this results. What was that?

liumbiwe - August 19, 2016, 1:02 pm

I was able to send 100k , from host.

Linus Torvalds - August 19, 2016, 2:38 pm

It will depend on the server

PONI Walker - August 20, 2016, 10:04 am

I can give you a good shell in php, messege me in the pm and i sent you..

Shells are dead, though I can make you a nice GET Shell (I can also make POST shells).
