Thread: [Admin Page Finder](#)

MDX. - August 16, 2016, 8:40 am

Well. I need Admin Page Finder no metter is program or online scan.

So, Most of the pages when i type in www.pagename.com/robots.txt it says :

(EXAMPLE)

Disallow: /wp-content/

Disallow: /wp-includes/

Disallow: /wp-admin/

Disallow: /trackback/

Disallow: /xmlrpc.php

Disallow: /feed/

What should i do ? How to get acess to the Admin Page. And did i have chance to allow the acess of the page.

I appreciate your taking the time to help me and solve this problem.

Thank u in advance

<https://sourceforge.net/projects/admin-page-scanner/>

Did not test it out, but it proolly should do the work

You can use havij it has an integrated admin page finder. For a higher level you can try Dirbuster, it uses bruteforce to find hidden website directories, admin page included
