Thread: [\[HQ-Tutorial\]\[Method 2\]How to Bypass a Cloudflare protected site and get the ip. v2.0](#)

kmz22222 - August 16, 2016, 3:24 pm

Before i start this tutorial,i want to thank the 1,700 people who viewed this tutorial and gave me some feedbacks on the first method.

Link to method v1.0: <https://hackforums.net/showthread.php?tid=5334635>

I apologize for those who couldn't use the method,it is used for websites that have cloudflare poorly configured on their website.

But in this tutorial,i will show you some other stuff that you can do to bypass the fucking cloudflare protection.

And without fucking further a do,let's start this shit.

=====

What is this used for?

This is used to bypass cloudflare's security on a website and get the real hidden ip address.

=====

A simple NSLookup:

Our example here will be leakedsource.com

If u did a nslookup in the command prompt,this shit will appear:

[img]http://image.prntscr.com/image/d6b6ad7f06a7469a9d39cb00e8360b93.png[/img]

As u can see in the picture,the lookup gave us 2 ip address which both start with 104

If a website give u 2 different ip addresses which looks like that,that means it's protected from cloudflare.

Another way to know if it's protected or not u can do a lookup on iphub:

[img]http://image.prntscr.com/image/711cb9d164164e1f97c8eeb8807aaefe.png[/img]

If u came here to bypass this shit and get the real ip,then u came in the right place.

Follow me,fag.

=====

Request Bin Method:

This trick is usually used for forums but if you are smart enough u can make it work with other websites.

In this example i can't show u the forum/the example that we will use because u r not allowed to advertise forums here,so basically follow these steps if u want to get the real ip of a forum that is protected with cloudflare or whatever the fuck protects it.

Steps:

Step 1: Go here <https://requestbin.in> and click on "Create A RequestBin" button.

Step 2: Copy the "Bin URL"

Step 3: Go to the forums and choose the option "Change Avatar" usually found in the User CP.

Step 4: Go for the option "Avatar URL" and put ur bin url there and click enter.

[img]http://image.prntscr.com/image/437b081678a546f49e1924b23db423ce.png[/img]

Step 5: Refresh ur requestbin link and u will get the ip upon with other info.

How it works: Basically ur tricking the website to click on ur "ip logger"

=====

Netcraft Site Report Method:

Usually used if u fail with other methods.
Used for all kind of websites that are protected.

Steps:

Step 1: Go to http://toolbar.netcraft.com/site_report

Step 2: Paste the link of the website that u want to bypass cloudflare shit.

Step 3: Head to the "Hosting History" section.

Step 4: Viola~ U will see the history of hosting providers that the website used and HOPEFULLY u will get the real host provider upon with the ip address,OS, Web server and other info.

=====

DNS Dumps Method:

Usually used if u r an expert and don't want to use ez methods.

Used for all kinds of websites that are protected.

Steps:

Step 1: Go to <https://dnsdumpster.com/>

Step 2: Paste the link of the website that is protected

Step 3: Scroll down and pray to get the ip address.

Feel free to use other options on the website,also don't give up if u didn't get the ip.. go to the "Mapping the domain" section and u will find a picture HOPEFULLY containing the real host provider upon with the ip.

=====

I still have other methods that i can share with u guys....

If u guys want them,Simply write a reply down below and show some amazing feedback like u did the last time.

Just lemme know if u want more.

Posted on HF at: 08-16-2016, 02:54 PM

All credits goes to me since i am the one who made this tutorial.

Peace~

Razor Dz Trigger - August 16, 2016, 4:57 pm

thanks for sharing this tutorial :) if you can get this website ip just for testing ;) i want to test you

h4kurd.com

Wires - August 16, 2016, 4:59 pm

May come in use. Will try this.

kmz22222 - August 16, 2016, 5:14 pm

Look fam,I am busy as fuck right now.

After i finish my shits i'll pm ya the ip.. don't worry i can hack this shit.

I am glad that u liked ma tutorial ?

Thanks for the feedback fagz ?

EDIT: I PM'ed u the info,Enjoy it fam.

OP, there is a much easier way to do this. All you need to do is:

Go to <https://www.skidtools.net>, then sign up, after you sign up go to the cloud flare resolver, and vuala!

None the less, good tutorial OP.

kmz22222 - August 16, 2016, 6:10 pm

SKID TOOLS ROFLMAO ?

A cloudflare resolver won't always work.

Thanks for the feedback i appreciate it.

I must agree, the name of the website is some what funny. How ever you are right. Cloud flare resolver's won't/don't always work, and in those times you can come to OP's tutorial.

Yup.

Btw which website is funny?
