SaturnArts - August 19, 2016, 5:03 am

CnC appreciated.

YinYang - August 19, 2016, 9:29 am

Pretty cute, I think the header is a bit big IMO, and it looks a little low-res but apart from that good job. :)

It seems to be a .jpg - For some reason.. Noticed that all Imgur links recently are .jpg and not .png

Way to get around that is convert the png to a gif (one frame), then upload that to imgur

or use a better image hoster lmao

SaturnArts - August 19, 2016, 11:18 am

Yes I need to stop using Imgur its really gone to shit. But Minus stopped working. Any suggestion that dont reduce quality? Looking at Adobe Portfolio at the moment.

Viral221 - August 19, 2016, 1:37 pm

All my tags are uploaded on imgur and i have not encountered a quality reduction. If done on photoshop all i did was save as .png. unless its like photobucket whenever i upload a large image the quality is reduced and i went to settings to remove resize.

-Go to settings on imgur and check "Image Quality"

If you already checked that then i have no idea lol

It is not that, I tried it. Imgur just recently started making .png into .jpg - there's probably a good reason behind it.

rschetalover - August 19, 2016, 1:44 pm

The arrows could be a bit better, looks like an other style, other then that nice and clean.

Intern - August 19, 2016, 3:07 pm

Hey bud it's a great start, needs some more love and touching up but you're getting close.

I think the ending sig should be aligned to the right of the comp

Arrogance - August 19, 2016, 3:22 pm

Looks clean, but as someone pointed out earlier, the header is just too big.

SaturnArts - August 20, 2016, 9:48 am

That seems to be a broken image :D

Anyone know a better host?

Kappa. Imgur is now converting all .png to .jpg and heavily fucking up quality.

Test from Adobe portfolio:

?Meda - August 20, 2016, 11:47 am

Hey buddy, use cubeupload.com or postimage.org for .png files. So far those two have not let me down for quite a while as I've been doing graphic design ?

About the thread, it looks clean and nice! The only thing I would change is the features in the packages. Consistency is key, and on the basic/standard packages the features seem crammed inside. When making thread designs try putting the premium package in the middle (unless your client requires otherwise) as you did for the standard package, since those packages are the most expensive and require more attention in order for the owner to make more profit. A great reason for that placement is that premium packages most of the time have the most features, therefore they take up the most space (so it will automatically be the biggest feature). Also, keep the spacing between the features the same in all of the packages to keep the consistency. For example make the premium have 6 packages (like you have rn in the standard package) and the others with like 4~.

All in all, great job and a great start for you! Excited to see more stuff from you ?

And don't do that, since .gif limits you to only 256 colors.

Thanks for the CnC. I'll keep it in mind. I found that adobe portfolio is working great
