Thread: [imgcrypt - an almost FUD crypter](#)

SIM-2626129 - August 22, 2016, 10:18 am

imgcrypt

an almost FUD crypter source

[x] uses cloud image based storage method [x]
[x] works with native / .net apps [x]
[x] should bypass some major AVs on Runtime [x]
[x] only 1 scantime detection [x]
[x] noob friendly (easy to understand) [x]

Hey guys! What's up! For you who remember me, [\[ZERO\]](#) here and for those who don't, I'll just tell you that I was around HF since 2009 and at that time

I was making and releasing all sorts of tools here at HF (0 Crypter, Imperium RAT, Cybershark Keylogger). I recently came back here after a loooong break

(break happened mostly cause I lost my account here) and decided to start giving back to the community once again. Later in this thread,

I'm going to share some of my old threads from my old account, just in case somebody would need any of the methods I've shared in

the past (they are mostly in VB, but don't blame me, I was still learning C# back then). ?

So, what do we have here now?

Well, basically I decided to test myself and see if I can make a FUD crypter once again and well, I almost had total success with it,

but as I can see, many things have changed in the meantime and bypassing AVs at the runtime is kinda different now.

What kind of a crypter this is?

It's a normal .net 2.0 crypter, but with a twist (at least in my head)! It transforms files into images, which can then be uploaded to imgur

(didn't have the patience to make this, I leave this to you guys) and later on decrypted inside of a stub, making it something like crypter/downloader.

Is it really FUD (OMG OMG OMG)?

Yeah, should be almost FUD, only one scantime detection from F-Secure (I know you guys will figure this one out, it's a piece of cake)

and at runtime, it should be mostly FUD. It isn't from AVG, that I know for sure, but it is for ESET (yay!)

You are crazy! Why are you not selling this?

Guys... I have a job lol. I don't need money from this. This was only a challenge for me and since I did it, I see no point in it anymore.

Download maybe?

Not anymore bitches. Thank those kids that trashed this thread and -repd me. Goodbye losers, rot in hell.

The Kraken - August 22, 2016, 10:21 am

Looks nice man, Posting for maybe later.

We need more guys like you lol. Thanks.

bad_c0de - August 22, 2016, 11:02 am

Thanks you for this post, this will help me alot :)

SIM-2626129 - August 22, 2016, 11:34 am

No probs, hope you guys find it useful. :)

HFDone - August 22, 2016, 11:40 am

yhe remember you from the old days

Crescent - August 22, 2016, 5:25 pm

(Aug 22, 2016 11:34 AM)ZERO-IS-BACK Wrote: [\[CITE\]](#) No probs, hope you guys find it useful. :)

How do I package this? I'm a complete noob, honestly. Been wanting to actually be able to distribute a RAT to my teachers this year (did it Freshman year, worked out great.) No reliable crypters and if there are, they have to be paid for, which I really don't have the money for right now.

SIM-1676753 - August 22, 2016, 8:11 pm

Definitely going to be using this to hide my porn. Thanks OP!

SIM-2626129 - August 23, 2016, 1:21 am

Weeeeell, long story short, use imgcrypt to create an image from your rat exe and then upload that to imgur, copy the link, paste it into imgcrypt-stub line where it says: string file =

"https://imgur.com/au12456"; - something like that. Build imgcrypt-stub and there you have it.

Aristocles - August 23, 2016, 1:30 am

The source code is so messy I'm starting to guess you are new to C#. Naming Conventions, Inherits, refactoring etc y u no do this ?

quick cancer list :

<https://github.com/brstefanovic/imgc/blob/master/imgcrypt-loader/Loader.cs#L195> -> int num99999

FTW wtf dude looks like decompiled code to me

<https://github.com/brstefanovic/imgc/blob/master/imgcrypt/Form1.cs#L35> -> no need to use

BGWorker if you code well, goto <https://hackforums.net/showthread.php?tid=5176588> or devu

<https://github.com/brstefanovic/imgc/blob/master/imgcrypt-stub/Program.cs#L55> -> this code is not wrong but the fact that you are over-abusing of static shitfields makes it bad.

So message to every new C# user : do not use this project as a base, it contains bad habits and bad coding style.

No I'm not new, I simply don't care. I wanted to try to make a FUD crypter, I did it, that's all that matters to me. Was I paid any money to make this? No? Why should I bother with proper coding styles and naming conventions? Anyway, as always a wild smart ass appears, so be kind and stay off the thread if you came here to flame and under appreciate others work.

<https://github.com/brstefanovic/imgc/blob/master/imgcrypt-loader/Loader.cs#L195> -> int num99999

FTW wtf dude looks like decompiled code to me ---> Say that to the guy who coded that RunPE, not me.

<https://github.com/brstefanovic/imgc/blob/master/imgcrypt/Form1.cs#L35> -> no need to use

BGWorker if you code well ---> your brain stopped working? where do you see a background worker?

<https://github.com/brstefanovic/imgc/blob/master/imgcrypt-stub/Program.cs#L55> -> this code is not

wrong but the fact that you are over-abusing of static shitfields makes it bad. ---> Really? try making it all fuzzy and organized and scan the file online. Hellloooooo Avira.

Quote:So message to every new C# user : do not use this project as a base, it contains bad habits and bad coding style.

Nobody said that this should be used as a base project. Read the OP. This is an unfinished crypter containing currently FUD methods. This source is only to be used for ideas when making crypters, not actually making a crypter out of this.

Stupid kids will be stupid.

HFDone - August 23, 2016, 4:16 am

what the peb patch doing here its not really needed

Aristocles - August 23, 2016, 5:23 am

Fact is, imgcrypt is sloppy, in all the possible way. You entertain it as a noob-friendly project so ppl can use it and modify it but people shouldn't even fork it, the code style is bad, you give like 0 credit to the RunPE original coder, you don't try to clean its code nor to refactor it. I wouldn't recommend using this source anyway.

SIM-2626129 - August 23, 2016, 6:00 am

Sorry, but nobody asked you about anything. Stay of the thread flamer.

Aristocles - August 23, 2016, 7:40 am

So you don't accept criticism right ? You thought you would come back with a sloppy project and ppl would say thank you amazing project, am I right ? I think I am.

7 - August 23, 2016, 7:45 am

Great source code for the collection thanks

I do accept criticism, I like when somebody points out to my mistakes but you're not doing that, you're just trash talking.

Sleek. - August 23, 2016, 9:20 am

From [here](#)

(Aug 21, 2016 02:23 PM)ZERO-IS-BACK Wrote: [\[CITE\]](#) I can make one for you, 7 KB encrypted size compatible with .net 2.0 and guaranteed long time FUD scantime/runtime. But it ain't gonna be cheap. If you don't have at least \$5000, don't even bother to contact me.

...

You have no clue what you're doing, do you?

Code is fucking horrible, use enums for bitflags, use a consistent naming convention.

Argue? Nigga this is a one sided roast by NETGuard and 1% me, stop acting like you're above any of us, when you're posting trash that skids can copy&paste for their next big vb crypter!111

SIM-2626129 - August 23, 2016, 12:13 pm

tl;dr, thanks for bumping the thread of a source you don't like.

MeWoody - August 23, 2016, 12:16 pm

Looking good. Will take a look at it some time. Thanks for releasing stuff like this, it really helps people that do not want to pay money for programs and shiz (like me of course)

SIM-2626129 - August 23, 2016, 12:16 pm

You're welcome. That was one of the reasons I released this.

Nick (Name) - August 23, 2016, 6:22 pm

Very nice copy and paste, I've seen this source before, I love the fact you took and added your own extra methods because you didn't know how to use the original methods, and adding this crap with the images is stupid, there is no reason to do that, it's just unconventional and slow. The stub is a downloader and doesn't actually store the files inside of the stub at all. Runtime detections are through the roof, I created a builder from your broken source which included two unnecessary projects that can simply be added into the main project. If you knew how to make a crypter you would have used codeDOM rather than hardcoding the stub. Thanks for the source that you took credit for, this is nothing of your own, I can tell what is your code and what is the copy pasted code, you suck at naming conventions.

SIM-2626129 - August 24, 2016, 1:26 am

Download links have been removed because of the petty virgin kids @ HF. Thank them.

Man I just love your attitude! So glad you removed your copy and pasted source, next time don't blame it on the people that called you out but blame yourself. Go back to playing your angry birds game, you're probably better at that than pasting public source and calling it your own.
