Thread: [Rogue thread design progress](#)

Method - August 25, 2016, 7:37 am

So basically I found out my first attempt was pretty much rubbish. This is the last thread here I will be making for a while (due to not wanting to make spam threads). I would just post this in the other one, but I want a different type of feedback and hopefully this time I'll get the advice.

1st rubbish attempt: Spoiler [\(Click to View\)](#)

I would like to know what are some good fonts/icons to download or even backgrounds. I'm really knew to this so any help would be welcome. Anyway, to stay on topic here is my 2nd ever design.

2nd attempt:

Spoiler [\(Click to View\)](#)

3rd attempt:

Spoiler [\(Click to View\)](#)

4th attempt:

Spoiler [\(Click to View\)](#)

5th attempt:

Spoiler [\(Click to View\)](#)

6th attempt:

Spoiler [\(Click to View\)](#)

I'll keep posting my material for you all to judge. Feel free to roast my ass as I'm new to this anyway. Thanks bruddas.

First design has a little bit too little spacing and the second one has too much spacing. But you are def on a good way.

One more thing to change is the font, you really need to find a new font to use. Try to Google "Ubuntu font" and see if that one would do better for you.

Good luck

B?ker - August 25, 2016, 8:36 am

Here's are some suggestions I have, on the center move the font to align with the icon, Personally I dont like that font myself. Top header try and align that, my general suggestion is align the content, it makes it flow nicer in my opinion.

Since every time I've done it, the page size has been too large one way or another. How do I cut the parts I no longer need?

What I normally do is to use "Ctrl + T" (transform-tool? I think that is the shortcut key.) to resize the shape/image and then drag the following parts up. Then you have a large empty space in the bottom right?

Make a new file with less height that works and then just drag all your layers/groups into the new file.

Couldn't of said it better myself!

Make a new file with less height that works and then just drag all your layers/groups into the new file.

Damn that sounds like a mission. Is there not anyway to just cut the excess parts? (Unneeded space)

M?xim - August 25, 2016, 8:48 am

That is a good question.. Not sure to be honest. I use the method stated above, takes like 5 min hehe. Give it a shot or maybe you can ask someone from the free section to do it for you?

Nope, Designing is an art my friend and art shouldn't be rushed. Take your time that way you don't need to revise it a lot, is my going motto.

Wouldn't necessarily call it rushing I would just call it a shortcut. It would make more sense taking a quick method over a long method that provide the same results.

Thanks both of you though!

Very true, the good thing about his method is you can resize multiple at once and very they are all the same and not off by a few pixels. Best of luck with OP you got this keep trying, as it's a skill not something you are born with ??

Method - August 25, 2016, 9:28 am

Playing around with styles n shit right now, it's actually pretty fun. Tomorrow when I'm not busy I'll download a load of icons, pictures and fonts.

<https://i.imgur.com/dknC0zu.jpg>

Just a new style I tested out.

SaturnArts - August 25, 2016, 12:39 pm

You could check out my tutorial on Thread Designs in the graphics tutorial section. I'm sure it'll help you a lot. I plan on making more so keep an eye out.

Of course learning is copying. I can share some icons with you as I got an account on Envato elements.

(Aug 25, 2016 08:45 AM)Rogu? Wrote: [\[CITE\]](#) Damn that sounds like a mission. Is there not anyway to just cut the excess parts? (Unneeded space)

In Photohop, just use the crop tool to make it less height. It's what I always do. Short and simple.

Keep consistent in things like fonts and lighting in stock images that you use in your design.

Keep consistent in the font and maybe make titles bold with better letter spacing or something, idk haha.

Intern - August 25, 2016, 3:11 pm

First things off, that second design is a HUGE improvement ~

I think that you could downsize a little on the width because on my screen it's edge to edge and I don't know if you're trying to simulate a webpage but something about it feels restricting and it's just coming out to me violently :o

I love your efforts I can't wait to see the revision !

Yeah I've been trying to down the size but I'm just going off what other users have provided (size etc) but somehow mine always seems to come out overly large. When I'm home I will try pump out some more. But I'm sure I'll get the hang of it soon! Thanks

Haha just preview it at 100% or "save for web" and preview it !

Good luck bud, mssg me if you ever need any help ~

Hamekaze - August 25, 2016, 4:23 pm

One advice: font synergy.

Method - August 25, 2016, 4:28 pm

Will do, I'm still getting used to the tools and shit so I'll have to find what you want. All of them are saved under .jpg when I finish even viewing it at 100%. Still a bit confused with it all but I'm sure i'll learn.
