[Userscripts Help Desk | Install | Configure | Create or edit](#)

Well I'll keep that straight to the point.

If you're struggling with installing, configuring, creating or editing a userscripts, post your question here.

If you have a custom request, go ahead and post here or PM me as well, I may do it.

If you want to see my previous experience with userscripts, just edit the "SYT" <form> at the top of the page. If you're reading this, you probably know how to, else just PM me.

I need help finishing HSFT.... HELP!

Vouch for Hash G. He knows his shit.

B?ker - September 1, 2016, 12:09 pm

I have basic questions

1. What is userscript, or what language is it similar too?
2. Any tips or tutorials for beginners?

1. A userscript is a simple JavaScript file. You have to add some extra comments at the top of the file to include informations relative to the script such as author, name, version etc, but once it's done it's plain JavaScript. To use one, you gotta download a userscript manager, such as GreaseMonkey for Firefox, TamperMonkey for chrome etc.

2. There's one sticky in this section, read it. You need to have some experience with interacting with the DOM with JavaScript though, but that comes pretty well by learning.

Again, userscripts are JavaScript. So, no.

Frukt - *September 5, 2016, 2:18 am*

Hash G made a userscript for me, it's working flawlessly and best of all, he mad eit in 5 minutes.

Thanks for the help!
