Thread: [\[Release\] Cross-Platform PokeSniper - Manual/AutoSnipe - \(Works on Windows/Mac/Linux\)](#)

Koolsami7 - August 25, 2016, 10:56 pm

Cross-Platform PokeSniper

Compatible with anything that can run Java 1.7 JRE and has Internet (that isn't blocked by Niantic).

Download Link: <https://dl.orangedox.com/rMym2ArJueEoJc8f6G>

Virus Scan:

<https://www.virustotal.com/en/file/f990e27170aaa7ae669f692031e4769100da16d67bd21ffa8ca2a928c5416c61/analysis/1472189451/>

Screenshots:

Settings:

Console:

How to start the application:

Open CMD or Terminal

Enter the command "java -jar Sniper.jar" (There are a few more arguments, details below)

The application will open, and you will be asked to enter your settings.

Enter your settings

Click "Start Sniper"

That's it :)

To automatically start an AutoSnipe with the list selected, use the arguments below:

Code `java -jar Sniper.jar autosnipe <pokewatchers/pokesnipers>`

If you decide to run the sniper without a GUI, that's not an issue! We will include an example configuration along with the .jar so that you can edit the settings manually, without the settings gui.

In order to run it without a gui, use the "nogui" argument.

Example:

Code `java -jar Sniper.jar nogui [[autosnipe] <pokewatchers/pokesnipers>]`

[] = optional

< > = required, if optional is used.

If you still don't get it, here's an example on how to autosnipe PokeWatchers:
Code java -jar Sniper.jar autosnipe pokewatchers

To AutoSnipe PokeSnipers without a gui:
Code java -jar Sniper.jar nogui autosnipe pokesnipers

It's as simple as that! I hope you enjoy this tool :)

hekktikk - August 26, 2016, 3:14 am

Looks pretty sweet dude, I'm too scared to use it though because of teh_baNhaMmeR

Temp_Profile_Axil - August 26, 2016, 5:13 am

Hey dude i did as you posted but i keep getting this message "Error: Unable to access jarful Sniper.jar" and when i open the jar file and put all my details in it just goes away??

Guys do you get banned when you use shit like this? #imanoob

hekktikk - August 26, 2016, 2:56 pm

Very risky my friend, you can always do it on an alt and hope it doesn't get banned.

Don't do it on your main.

Your current directory in CMD/Terminal must be the one that contains the Sniper files.

Temp_Profile_Axil - August 26, 2016, 9:11 pm

^^ tnx it worked finally a sniper for a mac :) tnx dude

Hey is there any way to connect that sniping bot to a discord channel?

Nighterance - August 30, 2016, 1:37 am

Throught cmd it says cant access jarfail sniper.jar, i placed it in cmd map.

When i open it just by double click, press start, app closes and nothing happens.

Okay, i fixed that by making full path to file. noiw console tryed to work.

Its trying to find pokemons, but noone is there, am i softbanned?

You are most likely soft banned.

Offbeet - *January 20, 2021, 10:14 am*

jksmk says it failed to archive

Despize - *January 20, 2021, 3:50 pm*

Looks interesting but I'm going to stay away because of the ban hammer! Good work tho keep it up!
