Thread: [Skype Resolvers](#)

raphaela98 - August 27, 2016, 12:39 pm

Hi guys, everytime I try to resolve a Skype2Ip or Skype2Email it always says that a error has occured. What is happening? I tried all the popular Skype Resolvers.

Thanks in advance

redlightrouter - August 27, 2016, 1:44 pm

I tried using WireShark. Is Skype not using p2p anymore? btw. resolvers don't work anymore.

Isn't WireShark a bruteforce program? Does it work as a resolver? Btw, some people told me to use Cain & Able, worth it or nah?

Thank you

Skype did an update, basically resolvers are obsolete from what I hear.

Yeah. Try checking your target here:

<http://skypegrab.net/oldip.php?username=>

If you do not get a result from there, you will have to IP log them or use a similar method to get their IP.

If you can't get it via that, try using either a deob version of skype, a IP logger, or wireshark.

Grim - August 27, 2016, 2:52 pm

Skype did an update actually quite awhile ago. Making most resolvers not work anymore. If you want to get someones IP you could always just send them an iplogger.

LeanThePhean - August 27, 2016, 2:53 pm

Imaoooooo yea get deob or some shit everyone who updated skype cant be resolved, like M.D said, some kids are still in the skypegrab.net database. go check it out,
