Thread: [How can I backup/download all my Mega Files](#)

Ooze - August 28, 2016, 7:10 pm

Hello HF, I want exactly sure where best to post this thread, but I decided here.

I recently bought a new external hard drive and I wish to use it to backup all my files that are stored on MEGA.nz

Is there an easy way to download all these files?

Try google I would say you might get more luck unless you are here because google had no answers. If anything just download it like normal.

I did try google, I have thousands of files so I can't download them one by one, also there is a weird limit and it wont let me download them all at once.

However I have heard of scripts that download the files, thats what I'm interested in

It was as simple as using Mega Sync
Thanks all
