Thread: [THE ALMIGHTY ANTI-RAT COMPUTER TUTORIAL|> Stop pesky rats from hacking your accounts](#)

spoof - August 28, 2016, 10:21 pm

THE ALMIGHTY ANTI-RAT COMPUTER

What's a RAT?

>AKA the "Remote Access Trojan"

is a sort of malware mainly used to gain administrative control over a targeted computer for malicious intent. It can be used to steal passwords, remotely control your desktop, view your webcam, and remote execute other files to cause more destruction.

other stupid features:

Spoiler ([Click to View](#))opens dumb chatboxes

keyloggers

remote chats

reverse proxys

crypto miner

u get the point

I'm definitely infected and i'm scarred for life, wat do?

Stopping your accounts from being hacked|>

Firstly, you should use a browser that allows password encryption.

[Firefox](#) is your new best friend.

Firefox has a feature which allows you to use a master password for your saved passwords on your browser. This also encrypts your saved passwords. Therefore, your little "RAT" problem won't be able to use a password stealer for browser.

REMOVE THAT SHIT GEWGLE CHROME

How to setup a master password:

Spoiler ([Click to View](#))

As for another problem, keyloggers.

You can easily install a keyscrambler on your computer which virtually "encrypts" the letters you type on your keyboard.

You can easily get one for FREE here: <https://www.qfxsoftware.com/>

Stopping remote desktop:

This can be done by going to your computers properties > Remote Settings > Remote Spoiler ([Click to View](#))

then uncheck Allow Remote Assistance.

Side note: this can cause problems with other remote desktop programs such as skype sharing screens/teamviewer. You may have to checkmark it again if you want to use those during that moment of time.

He's creeping me on my webcam, wat do?

Your first instinct of course, block that mofo with black duct-tape. Done, simple.

Conclusion

Now that you're pretty much protected from the key features of a RAT, you should be pretty fine if you're dumb enough to download an infected file. If you're currently infected and you came to this tutorial to get rid of it, please find another tutorial. If I missed anything i'll read through this again cause I was stoned when i wrote this. Your reviews on this are highly appreciated.

Now,

WHO WANTS TO GET SOME RAT INFECTIONS FOR SHITS N GIGGLES,
i'm kidding, don't actually.

ps. fr tho follow me on twitter

Avira - August 28, 2016, 10:47 pm

Something tells me you hate rats rofl

Not true, I think they're a neat program to play around with when you're bored. I just wanted to share this

kpown - August 29, 2016, 7:55 am

nice tutorial will share this with others

?Adroit - August 29, 2016, 9:24 am

Nice tutorial. Posting to save

?Synapse - August 29, 2016, 9:29 am

Very nice guide, as a RATTER myself I'm very paranoid of what I download and run so this will help a lot.

spoof - August 29, 2016, 10:30 am

You're all very welcome :)

Hozz - August 29, 2016, 10:50 am

Very nice tutorial :)

Well done!

kmz22222 - August 29, 2016, 8:35 pm

Amazing HQ Tutorial but i only disagree with something...

Using a master password is not safe at all and there is no "Browser Password Encryption"

Like for fuck sake if i used my USB on a computer using a master password i'll still get it and it would be MUCH MUCH MUCH easier to crack passwords for multiple accounts since they are the same.

Idk why but i am not comfortable with the "Master Password" shit.

Fuck Firefox it have exploits... Just like chrome AKA. Ram Eater.

I mean i've tested with most popular rats on this forum and nothing shows up for it. Though you're correct, every browser has its problems. & You can never be fully secure once you're infected.

Fuck RATs mate.

I am talking about softwares that are made specifically to get the browser passwords.

I think they will be able to get the master password too?

And yeah you can never be fully secure, but you can remove the infection.

Alright alright.

Thanks for the tutorial anyways.

And i am still not comfortable for the master password. ?

ExclenKr - August 29, 2016, 9:21 pm

Good, Keep it up boy ! Nice sharing.

cyberducky - August 29, 2016, 9:24 pm

aka "Remote Access Trojan"

This made me cringe. It's clearly a Remote Administration Tool

Also, KeyScambler won't protect you from most modern keyloggers which have software that specifically disables KeyScambler.

?Adroit - August 29, 2016, 11:02 pm

Same here.

Atleast he tried tho.

Tomato, tomahto.

Remote Access Trojan

Remote Administration Tool.

Same shit, different names.

Also most rat's on this market don't even disable keyscrambler, plus most of the people using RAT's don't even know how to disable it via scripting.

I don't understand why ya'll gotta be so nappy.

~ Left HF For Good ~ - August 30, 2016, 3:42 pm

"Block that MoFo"

Loved it.

I already knew most of these, but none the less great tutorial OP! ?

El Guaje - September 1, 2016, 12:05 am

Thanks alot for this tutorial but wouldn't other browsers also offer password encryption as standard? also once heard a member here got ratted and was caught on webcam jacking off to porn and the ratter then uploaded it to his twitter feed

Very nasty stuff

spoof - September 1, 2016, 7:55 am

I believe opera does it too, I'm not sure though

giggetto94 - September 9, 2016, 11:59 am

Amazing thread and great tutorial thanks for sharing!

G_LO - September 9, 2016, 11:14 pm

Thanks for this tutorial! Great work.

Mysticalcx - September 10, 2016, 11:10 am

Not ht ebest but i guess its what ever

mackavelli - September 11, 2016, 6:03 am

nice tutorial will probably check it out.

Yolosmokecrack - September 13, 2016, 1:02 am

this thread is very helpful but if you think your ratted your first reaction should be turning your internet off then finding the .exe or w/e and removing it from startup etc.

spoof - September 14, 2016, 4:30 am

Well obviously yeah, but this is basically just a future "setup" incase you go on a downloading spree for something you want. It's always useful to have first case scenario protection as you find the exe. Because in the amount of time that takes, they couldve already taken your passwords from your browser and keylogged you.

MohammadAliPanhwar - April 2, 2019, 3:20 am

I will try this. Thanks for the post.(2)
