Thread: [Refresh when deleting PM's](#)

?Enlightened - August 29, 2016, 9:50 pm

hello,

So I've been sorting out my PM's and while deleting PM's I've run into a very annoying process that occurs when doing so....

As you select PM's and delete them, the page refreshes back to page 1 instead of the page you were just on.

So for example....

Say you've navigated to page 15 and you have 30 pages of PM's, taken you a while to get there...

you sort through a few PM's and select the ones you want to delete

You press delete and navigate back to page 1...

not only has the order changed (since you've deleted a few PM's) you also have to try and navigate back to where you were.

While this isn't a huge issue, it's a pain when trying to sort out PM's especially trying to organise which ones to keep and which ones delete..

So TLDR my suggestion:

When deleting PM's, instead of redirecting/refreshing back to page 1, refresh to the same page the user was already on.

It would make life a lot easier when it comes to sorting PMs.

****sorry if this suggestion has already been made, could not find it when searching**

You have no idea how much this frustrates me as well. Complain to MyBB.

Also this is why I have to deal with last-in, first out as the defacto for replying to PMs.
